Magmaweld is a manufacturer of Stick Electrodes, MIG/MAG & TIG Wires, Flux Cored Wires, Submerged-Arc Wires and Fluxes, Welding Machines, Welding Ancillary Products and Automation Systems in Turkey. Oerlikon Kaynak Elektrodları ve Sanayi A.Ş. was founded in 1957 in order to manufacture stick electrodes as a licensee of Oerlikon-Buehrle AG.

In the year 1996, in order to reduce costs, to strengthen the leading position in Turkey and turn Magmaweld into a global brand, two old factories in Istanbul were moved to new, state of the art factory in Manisa, situated in the west of Turkey. In 2010 the second factory has been opened also in Manisa to produce high-tech welding equipment as well as to integrate robotic automation systems.

The MAGMAWELD brand came out as an analogy between the molten core of the earth, the MAGMA and the WELDPPOOL.

Magmaweld greatly values technical education and has been contributing to the training and education of thousands of welders through regular, free of charge courses since 1961. This service helps to increase consumer awareness and technical competence throughout the industry.

Magmaweld strives for customer satisfaction and process excellence. In order to satisfy customer needs, all questions and remarks about products, training, welding technologies, welding procedures, standards, work safety and automation are processed through the call center at +90 444WELD (4449353) or through live support from www.magmaweld.com where the relevant information is directed to Magmaweld's experts.

STICK ELECTRODES

Rutile, Basic ve High Efficiency Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
ESR 11			
AWS/ASME SFA - 5.1	E6013	Especially suitable for welding in sheets thinner than 5 mm, galvanized sheets and tubes, primer painted, painted and slightly rusty steels and in production of tanks and boilers, tube installations. Very easily operated in positional welding, including vertically-down. Good gap-bridging. Smooth arc, well suited for tack-welding due to its easy arc striking and re-striking properties. Possible to use equally well both with AC and DC. Welds are smooth, slightly concave and blending into base metal without undercutting. Slag is self-releasing.	   If required 1 Hour
EN ISO 2560 - A	E 38 0 RC 11		
TS EN ISO 2560 - A	E 38 0 RC 11		
ESR 12			
AWS/ASME SFA - 5.1	E6012	Especially suitable for welding in sheets thinner than 5 mm, galvanized sheets and tubes, primer painted, painted and slightly rusty steels and in production of tanks and boilers, tube installations. Very easily operated in positional welding, including vertically-down. Good gap-bridging even at wide root openings. Smooth arc, well suited for tack-welding due to its easy arc striking and re-striking properties. Possible to use equally well both with AC and DC. Welds are smooth and blending into base metal without undercutting.	   If required 1 Hour
EN ISO 2560 - A	E 38 0 RC 11		
TS EN ISO 2560 - A	E 38 0 RC 11		
ESR 13			
AWS/ASME SFA - 5.1	E6013	Suitable for joining and repair welding of light steel fabrications, iron works, wrought iron works, agricultural machines, boiler, chassis of vehicles. Used in all position except vertical-down. Particularly suited for the welding of horizontal fillets. Very smooth weld bead appearance, with easy arc striking and re-striking properties, quite and stable arc with fine-droplet metal transfer. Possible to use equally well both with AC and DC. Slag is completely self-releasing.	   If required 1 Hour
EN ISO 2560 - A	E 42 0 RR 12		
TS EN ISO 2560 - A	E 42 0 RR 12		
ESR 14			
AWS/ASME SFA - 5.1	E7014	Preferably used in mild steel fabrication, sheet metal and ornamental iron works on poor fit up joints. Due to its iron powder addition in covering, particularly suited for the welding of horizontal fillets grooves with higher speed. Suitable for all position welding except vertical-down. High current carrying capacity, low spatter. Quite, stable arc characteristics with fine and fast droplet metal transfer. Very easy arc striking and re-striking. Very smooth welds blending into base metal without undercuts. Slag is completely self-releasing. Possible to use equally well both with AC and DC.	   If required 1 Hour

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
ESA 20			
AWS/ASME SFA - 5.1 EN ISO 2560 - A TS EN ISO 2560 - A	E6027 E 38 2 RA 73 E 38 2 RA 73	Acid-rutile coated, high efficiency electrode having a weld metal approx. 165 %. Especially designed for welding fillets and narrow angle grooves. Produces complete root fusion and equal-leg fillet welds. Suitable for welding of galvanized, primer painted and slightly rusted components. Due to its low Silicon (Si) content, weld metal is also suited for subsequent galvanizing, enameling and plastic coating after welding. Provides very smooth welds without undercut. Slag is easily released, even from narrow angles. Welds are of X-ray quality.	   If required 1 Hour
ESR 30			
AWS/ASME SFA - 5.1 EN ISO 2560 - A TS EN ISO 2560 - A	E6013 E 38 A RR 12 E 38 A RR 12	Rutile type heavy coated electrode which is especially used in fabrication and repair welds of molten zinc bath made of Armco iron and very low carbon steels. Weld metal ensures high crack resistance against the effect of molten zinc. Possible to use equally well both with AC and DC.	   If required 1 Hour
ESR 35			
AWS/ASME SFA - 5.1 EN ISO 2560 - A TS EN ISO 2560 - A	E6013 E 38 2 RB 12 E 38 2 RB 12	Rutile-basic type coated electrode, particularly suitable for welding root passes and positional welding in fabrication of pipes, boilers and tanks. Also suitable for depositing backing-up beads in submerged arc welding. Owing to its low Si-content, weld metal is suited for subsequent galvanizing and enamelling.	   If required 1 Hour
ESB 40			
AWS/ASME SFA - 5.1 EN ISO 2560 - A TS EN ISO 2560 - A	E7016 E 42 3 B 32 H10 E 42 3 B 32 H10	Suitable for repair welding on difficult to weld steels and repair welding of steel with unknown composition. Heavy coated basic electrode produce high tensile strength weld metal with excellent toughness values makes this electrode suitable for welding restrained structural members and large weld cross sections. Also preferred for buffer layer applications on steels before hardfacing and for welding of cast irons with high preheat.	   If required 2 Hour
ESB 42			
AWS/ASME SFA - 5.1 EN ISO 2560 - A TS EN ISO 2560 - A	E7016 H8 E 42 4 B 12 H10 E 42 4 B 12 H10	Multi-purpose electrode for assembly work, workshop and maintenance welding. Particularly used for repair welding of earthmoving equipment booms and approved for rail joint welding. Suitable for root passes as well as positional welding. Smooth and clean welds, merging into base metal without undercuts. Good gap bridging properties. Welds are of X-ray quality.	   Gerektigiinde 2 Saat

STICK ELECTRODES

Cellulosic Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
ESC 60		Medium coated, cellulosic electrode, especially designed for welding of pipes and plates in all positions at low welding currents. Due to its high penetration, particularly suitable for root pass and fill passes in vertical down direction. Used in pipe-line construction, shipbuilding, storage vessels and assembly works. DCEN (-) is ideal in root passes and DCEP (+) is recommended for fill and cap passes in vertical down position.	
AWS/ASME SFA - 5.1	E6010		 Root Pass.
EN ISO 2560 - A	E 42 2 C 21		 Fill Pass.
TS EN ISO 2560 - A	E 42 2 C 21		 Not Applicable
ESC 61		Medium coated, cellulosic electrode, especially designed for use in AC, as well as in DC. Due to its high penetration, it is suitable for root pass and fill passes in vertical down direction. Used in shipbuilding, storage vessels, boilers, pipeline constructions, assembly and repair works in mild steels, steel casting, galvanized sheets and machinery parts. AC or DCEN (-) is ideal in root passes and AC or DCEP (+) is recommended for fill and cap passes in vertical down direction.	
AWS/ASME SFA - 5.1	E6011		 Root Pass.
EN ISO 2560 - A	E 35 2 C 21		 Fill Pass.
TS EN ISO 2560 - A	E 35 2 C 21		 Not Applicable
ESC 70G		Medium coated and Ni (nickel) alloyed cellulosic type electrode, suitable for welding high strength steels, micro-alloyed and low alloyed steels and pipes. Due to its high penetration, it is suitable for root pass and fill passes in the vertical down direction. Well-suited for welding high strength unalloyed and low alloy steels in shipbuilding, storage vessels, boilers, pipe-line constructions and assembly works. DCEN (-) is ideal in root passes and DCEP (+) is recommended for fill and cap passes in vertical down position.	
AWS/ASME SFA - 5.5	E7010-G		 Root Pass.
EN ISO 2560 - A	E 42 2 C 21		 Fill Pass.
TS EN ISO 2560 - A	E 42 2 C 21		 Not Applicable
ESC 80G		Medium coated and Ni (nickel) alloyed cellulosic type electrode for welding high strength and low alloyed steels and pipes. Due to its high penetration, it is suitable for root pass and fill passes in vertical down direction for use in pipe-line construction, shipbuilding, storage vessels and assembly works. DCEN (-) is ideal in root passes DCEP (+) is recommended for fill and cap passes in vertical down position.	
AWS/ASME SFA - 5.5	E8010-G		 Root Pass.
EN ISO 2560 - A	E 42 3 1Ni C 21		 Fill Pass.
TS EN ISO 2560 - A	E 42 3 1Ni C 21		 Not Applicable
ESC 90G		Medium coated and nickel (Ni) and molybdenum (Mo) alloyed cellulosic type electrode for welding high strength steels and pipes. Due to its high penetration, it is suitable for root pass and fill passes in vertical down direction for use in pipe-line construction, shipbuilding, storage vessels and assembly works. DCEN (-) is ideal in root passes DCEP (+) is recommended for fill and cap passes in vertical down position.	
AWS/ASME SFA - 5.5	E9010-G		 Root Pass.
EN ISO 2560-A	E 50 2 1NiMo C 21		 Fill Pass.
TS EN ISO 2560-A	E 50 2 1NiMo C 21		 Not Applicable

EM 171			
AWS/ASME SFA - 5.5	E8018-C1 H4	Heavy coated basic type electrode for welding fine grained structural steels and especially cryogenic steels, subjected to low service temperatures up to -60°C. Electrode produces tough and crack-free welded joints. Weld deposit is of extremely high metallurgical purity and very low hydrogen content. Owing to high crack resistance under difficult conditions such as dynamic loads, impact, vibration and low service temperatures, it is suitable for use in welding of storage tanks and piping. Suitable for use in root passes and joints in pipes and equipments of cold storage rooms with service temperatures down to -60°C. Electrode features a stable and concentrated arc. Especially 2,50 mm and 3,25 mm diameters are well-suited for positional welding. Welds are X-ray quality.	   If required 2 Hour

Low Alloyed, High Strenght and Creep Resistance Steel Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EM 176		Heavy coated basic type electrode for welding fine grained and low alloy steels which will be subsequently normalized or normalized + tempered after welding. Weld deposit is tough and crack-free and has a low hydrogen content. Especially 2,50 mm and 3,25 mm diameters well suited for easy positional welding. Welds are of X-ray quality.	   If required 2 Hour
AWS/ASME SFA - 5.5	E9018-G		
EN ISO 18275 - A	E 62 6 Mn2NiMo B 42		
TS EN ISO 18275 - A	E 62 6 Mn2NiMo B 42		
EM 180		Heavy coated basic type electrode for welding fine grained and high strength structural steels which have yield strength up to 690N/mm ² and tensile strength to 850N/mm ² . Suitable for welding high strength steels used in fabrications of crane, earthmoving equipment, heavy machinery parts. Due to its high toughness, crack resistance even under difficult operating conditions such as dynamic loads, high and low environmental temperatures, it is suitable for use in steel constructions, pressure vessels, tanks, boilers and special fabrications and in their root pass applications with safety. Weld deposit is of extremely high metallurgical purity and very low hydrogen content. The electrode features a stable and concentrated arc. Especially 2,50 mm and 3,25 mm diameters well suited for easy positional welding. Welds are of ray quality.	   If required 2 Hour
AWS/ASME SFA - 5.5	E11018-G H4		
EN ISO 18275 - A	E 69 6 Mn2NiCrMo B 42 H5		
TS EN ISO 18275 - A	E 69 6 Mn2NiCrMo B 42 H5		
EM 181		Heavy coated basic type electrode for welding low alloy high strength steels, particularly fine grained structural steels. Due to its crack resistance even under difficult operating conditions such as dynamic loads, high and low environmental temperatures, it is suitable for use in steel constructions, pressure vessels, tanks, boiler and special fabrications such as submarines and ships where military specifications are required. It can also be used for root pass applications of these constructions with safety. Weld metal is tough, resistant to cracking and has X-ray.	   If required 2 Hour
AWS/ASME SFA - 5.5	E11018-M		
EM 201		Rutile type, heavy coated electrode for welding creep resistant steels employed in the construction of pressure vessels, boilers and pipes, subjected to operating temperatures of up to 500°C. Due to its rutile covering, also possible to work in alternatig current (AC). Easy arc striking and re-striking. Very smooth and clean welds, blending into base without undercuts. Preheating, interpass temperature and post-weld heat treatment shall be done according to base metal used.	   If required 1 Hour
AWS/ASME SFA - 5.5	E8013-G

STICK ELECTRODES

Low Alloyed, High Strenght and Creep Resistance Steel Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EM 203		Basic type electrode for welding creep resistant steels subjected to operating temperatures of up to 350°C. Generally used for joining and maintenance of rotary oven plates in cement industry. Welds are of X-ray quality. Preheating, interpass temperature and post-weld heat treatment shall be done according to base metal used.	   If required 2 Hour
AWS/ASME SFA - 5.5	E7018-A1 H4		
EN ISO 3580-A	E Mo B 42 H5		
TS EN ISO 3580-A	E Mo B 42 H5		
EM 206		Basic type electrode for welding creep resistant steels employed in the fabrication of pressure vessels, boilers and pipes, subjected to operating temperatures of up to 500°C and high strength steels with high impact resistance up to -50°C. Welds are of X-ray quality. Especially preferred for welding of thick sections where high mechanical properties, charpy impact values and X-ray quality are required. Preheating, interpass temperature and post-weld heat treatment shall be done according to base metal used.	   If required 2 Hour
AWS/ASME SFA - 5.5	E9018-D1		
EN ISO 3580 - A	E Z Mo B 42		
TS EN ISO 3580 - A	E Z Mo B 42		
EM 211		Rutile type, heavy coated electrode for welding creep resistant steels employed in the fabrication of pressure vessels, boilers and pipes, subjected to operating temperatures of up to 570°C. Due to its rutile covering, also possible to work in alternating current (AC). Easy arc striking and restriking. Very smooth welds, blending into base metal without undercuts. For thick sections, basic covered EM 212 shall be preferred. Preheating, interpass temperature and post-weld heat treatment shall be done according to base metal used.	   If required 1 Hour
AWS/ASME SFA - 5.5	E8013-G		
EN ISO 3580 - A	E CrMo1 R 12		
TS EN ISO 3580 - A	E CrMo1 R 12		
EM 212		Basic type, heavy coated electrode for welding creep resistant steels employed in the fabrication of pressure vessels, boilers and pipes, subjected to operating temperatures of up to 570°C. Welds are of X-ray quality. Weld metal has a low diffusible hydrogen content (4ml/100g). Generally preferred in thick sections an where high mechanical properties and X-ray quality are necessary. Preheating interpass temperature and post-weld heat treatment shall be done according to base metal used.	   If required 2 Hour
AWS/ASME SFA - 5.5	E8018-B2 H4R		
EN ISO 3580 - A	E CrMo1 B 42 H5		
TS EN ISO 3580 - A	E CrMo1 B 42 H5		
EM 222		Basic type, heavy coated electrode for welding creep resistant and high pressure hydrogen resistant steels used in construction of pressure vessels, boiler and piping subjected to operating tempetarures up to 600°C. Generally preferred in thick sections with high mechanical properties and X-ray quality necessary. Has a stable arc, low spatter and smooth weld beads. Slag removal is easy. Weld metal has low diffusible hydrogen content (4ml/100g). Preheating, interpass temperature and post-weld heat treatment should be done in accordance with base metal to be welded.	   If required 2 Hour

STICK ELECTRODES

Low Alloyed, High Strenght and Creep Resistance Steel Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EM 255		Basic type, electrode for Cr-Mo-V type, designed for welding cast steels of identical composition, subjected to operating temperatures of up to 600°C. Suitable for joining and repair purposes on steam turbine parts, valves and seats, pumps, shafts and rolls. Observe specifications as to preheating and post-weld heat treatment to base metal.	   If required 2 Hour
EN ISO 3580 - A	E CrMoV1 B 42 H10		
TS EN ISO 3580 - A	E CrMoV1 B 42 H10		
EM 285		Basic type, covered electrode for welding high temperature creep resistant steels type 9Cr-1Mo steels with operating temperatures of up to 625°C. Suitable for welding of boilers and pipe fabrication.	   If required 2 Hour
AWS/ASME SFA - 5.5	E8015-B8 H4R		
EN ISO 3580 - A	E (CrMo9) B 42 H5		
TS EN ISO 3580 - A	E (CrMo9) B 42 H5		
EM 295		Basic type, covered electrode for welding high temperature creep resistant steels of type 9Cr-1Mo-V-Nb-N with operating temperatures of up to 650°C. Suitable for welding piping and components produced from P91, F91 and T91 steels. Can be used both in thin walled and thick walled pipes and casting successfully, especially in power plants, chemical and petrochemical industry. Welds are X-ray quality.	   If required 2 Hour

Stainless Steel Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EI 307R		Rutile coated electrode for joining dissimilar steels, depositing buffer layer before hardfacing and claddings on ferritic steels. The weld metal consists of austenitic Cr-Ni-Mn steel with possible small amounts of delta ferrite. The weld metal is highly crack resistant and therefore suited for joining difficult to weld steels and depositing stress relaxing buffer layers on crack sensitive base metal prior to hardfacing deposits. Weld metal work hardens by impact and pressure. Suitable for armour plates, high-manganese steels, rails, cross-overs, crane wheels, idlers, which are subjected to dynamically loading, pressure, impact and abrasion. It is non-scaling up to 850°C and highest operating temperature for dissimilar steel joints is 300°C. In the case of higher temperatures, use ENI 422 electrodes. Easy to use in positional welding and possible to use equally well both with AC and DC.	   If required 2 Hour
AWS/ASME SFA - 5.4	~E307-16		
EN ISO 3581 - A	E 18 8 Mn R 12		
TS EN ISO 3581 - A	E 18 8 Mn R 12		
DIN M. No.	1.4370		
EI 307B		Basic coated electrode for joining dissimilar steels and depositing buffer layer before hardfacing and claddings on ferritic steels. The weld metal consists of austenitic Cr-Ni-Mn steel with possible small amounts of delta ferrite. The weld metal is highly crack resistant and therefore suited for joining difficult to weld steels and depositing stress relaxing buffer layers on crack sensitive base metal prior to hardfacing deposits. Weld metal work hardens by impact and pressure. Suitable for armour plates, rail, cross-over, crane wheels, idlers, which are subjected to dynamically loading, pressure, impact and abrasion. It is non-scaling up to 850°C and highest operating temperature for dissimilar steel joints is 300°C. In the case of higher temperatures, use ENI 422 electrodes. Used with DCEP (DC+).	   If required 2 Hour

TS EN ISO 3581 - A	E 18 8 Mn B 22		
DIN M. No.	1.4370		
EIS 307		High efficiency (160 %) electrode for joining dissimilar steels and depositing buffer layer before hardfacing and claddings on ferritic steels. The weld metal consists of austenitic Cr-Ni-Mn steel with possible small amounts of delta ferrite. The weld metal is highly crack resistant and therefore suited for joining difficult to weld steels and depositing stress relaxing buffer layers on crack sensitive base metal prior to hardfacing deposits. Weld metal work hardens by impact and pressure. Suitable for armour plates, rail, cross-overs, crane wheels, idlers, which are subjected to dynamically loading, pressure, impact and abrasion. It is non-scaling up to 850°C and highest operating temperature for dissimilar steel joints is 300°C. In the case of higher temperatures, use ENI 422 electrodes. High current carrying capacity due to its low alloy steel core wire and possible to use equally well both with AC and DC.	   If required 2 Hour
AWS/ASME SFA - 5.4	~E307-26		
EN ISO 3581 - A	E 18 8 Mn R 53		
TS EN ISO 3581 - A	E 18 8 Mn R 53		
DIN M. No.	1.4370		
EI 308L		Rutile coated electrode for welding austenitic stainless Cr-Ni steels or cast steels, having an extra low carbon content, as well as stainless or heat resisting chromium steels or cast steels. Suitable for welding stainless steel tanks, valves, pipes and linings in chemical, food, beverage, pharmaceutical industries. For operating temperatures of up to 350°C, non-scaling up to 800°C. Possible to use equally well both with AC and DC. Easy arc striking and re-striking. Fine metal droplet transfer, good fusion of joint faces, finely rippled bead surface, easily removable slag.	   If required 2 Hour
AWS/ASME SFA - 5.4	E308L-16		
EN ISO 3581 - A	E 19 9 L R 12		
TS EN ISO 3581 - A	E 19 9 L R 12		
DIN M. No.	1.4316		
EI 308LB		Basic coated electrode for welding austenitic stainless Cr-Ni steels or cast steels, having an extra low carbon content, as well as stainless or heat resisting chromium steels or cast steels. Suitable for welding stainless steel tanks, valves, pipes and linings in chemical, petrochemical, energy, food, beverage, pharmaceutical industries. For operating temperatures of up to 350°C, non-scaling up to 800°C. Possible to use with DC. Fine metal droplet transfer, good fusion of joint faces, finely rippled bead surface, provides high strength weld metal.	   If required 2 Hour
AWS/ASME SFA - 5.4	E308L-15

Stainless Steel Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EI 308LRS		Rutile type electrode for welding austenitic stainless Cr-Ni steels or cast steels, having an extra low carbon content, as well as stainless or heat resisting chromium steels or cast steels. Suitable for welding stainless steel tanks, valves, pipes and linings in chemical, food, beverage, pharmaceutical industries. For operating temperatures of up to 350°C, non-scaling up to 800°C. Possible to use equally well both with AC and DC. Easy arc striking and re-striking. Fine metal droplet transfer, good fusion of joint faces, very finely rippled, flat and smooth bead surface especially in fillet welds, easily removable slag.	   If required 2 Hour
AWS/ASME SFA - 5.4	E308L-17		
EN ISO 3581 - A	E 19 9 L R 12		
TS EN ISO 3581 - A	E 19 9 L R 12		
DIN M. No.	1.4316		
EI 308Mo		Basic electrode, particularly designed for welding armour plates, dissimilar steels and for surfacing purposes. The weld metal consists of austenitic Cr-Ni-Mn-Mo stainless steel. It features high resistance to cracking caused by impact and high temperature and is therefore indicated for difficult to weld steels and depositing stress relaxing buffer layers on crack sensitive base metal or beneath hardfacing deposits. Use with DCEP. No pre-heat or post welding heat treatment is needed when welding armour plates. Interpass temperature should not exceed 120°C. Shall be used with shortest possible stick-out distance, at 90° angle to the work piece.	   If required 2 Hour
AWS/ASME SFA - 5.4	E308Mo-15		
EN ISO 3581 - A	E 20 10 3 B 22		
TS EN ISO 3581 - A	E 20 10 3 B 22		
DIN M. No.	1.4343		
EI 308H		Rutile type austenitic stainless steel electrode for welding especially 304H and similar austenitic stainless steels or cast steels and heat resistant steels, having high carbon content. Suitable for welding stainless steel tanks, valves, pipes and linings in chemical, food, beverage, pharmaceutical, fertilizer industries. Weld metal is suitable for use at high operating temperatures and it is also non-scaling. Possible to use equally well both with AC and DC. Easy arc striking and re-striking. Fine metal droplet transfer, good fusion of joint faces, finely rippled bead surface, easily removable slag.	   If required 2 Hour
AWS/ASME SFA - 5.4	E308H-16		
EN ISO 3581 - A	E 19 9 H R 12		
TS EN ISO 3581 - A	E 19 9 H R 12		
DIN M. No.	1.4302		
EIS 308		Rutile type stainless steel electrode with high recovery (160%) for welding 18Cr/8Ni austenitic stainless steels to mild steels and low alloyed steels and also for surfacing applications on such steels. Weld metal deposit is austenitic-ferritic stainless steels. Possible to use equally well both with AC and DC. High current carrying capacity, since core wire is not made of stainless steel.	   If required 2 Hour
AWS/ASME SFA - 5.4	E308-26		
EN ISO 3581 - A	E 19 9 R 53		
TS EN ISO 3581 - A	E 19 9 R 53		
DIN M. No.	~1.4301		
EI 309L		Electrode for joining dissimilar steels (austenitic steels to ferritic steels) and for austenitic claddings on ferritic steels. Weld metal consists of austenite with approx. 15% delta-ferrite. Claddings on unalloyed and low alloy steels are already corrosion resistant in the first layer. Highest operating temperature for joints between dissimilar steels is 300°C. In case of higher temperatures use ENI 422 electrodes. Fine metal droplet transfer, good fusion of joint faces, finely rippled bead surface, easy slag removal, easy arc striking and restriking.	   If required 2 Hour

Stainless Steel Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EI 310		Rutile type stainless steel electrode for welding heat resisting chromium and chromium-nickel steels as well as cast steels. Weld metal deposit is fully austenitic stainless steel, containing 25% chromium and 20% nickel. Suitable for welding heat treatment and industrial furnaces and equipments which are subjected to service temperatures up to 1200°C. Weld metal is non-scaling up to 1250°C. Especially it is resistant to hot crack. Exhibits high charpy impact energy at low temperatures. Weld metal is not corrosion resistant to sulphurous combustion gases. Possible to use equally well both with AC and DC.	   If required 2 Hour
AWS/ASME SFA - 5.4	E310-16		
EN ISO 3581 - A	E 25 20 R 32		
TS EN ISO 3581 - A	E 25 20 R 32

TS EN ISO 3581 - A	E 25 20 B 12		
DIN M. No.	1.4842		
EI 312		Rutile type stainless steel electrode for joining dissimilar steels and depositing claddings on ferritic steels. The ferritic-austenitic Cr-Ni weld metal contains approximately 50% of delta-ferrite and is non-scaling up to 1100°C. It features high resistance to cracking and is therefore suited for joining difficult to weld steels and depositing stress-relaxing buffer layers on crack sensitive base metals. Especially used in crack repair and build-up of tool and die steels, rebuilding of worn or cracked gear teeth, buffer layer on cutting blades. Suitable for welding galvanized steel plates. Possible to use equally well both AC and DC. Easy arc striking and re-striking. Fine metal droplet transfer, good fusion of joints faces, finely rippled bead surface, easy slag removal.	   If required 2 Hour

EI 316LB		Basic type stainless steel electrode for welding austenitic stainless Cr-Ni-Mo steels and cast steels, having a low carbon content. For operating temperatures up to 400°C. Especially suitable for welding of stainless steel chemical tanks and pipes made of low carbon austenitic 19Cr/12-Ni/2-3Mo stainless steels in chemical, textile, paint, paper industries. Used with DCEP.	 If required 2 Hour
AWS/ASME SFA - 5.4	E316L-15		
EN ISO 3581 - A	E 19 12 3 L B 42		
TS EN ISO 3581 - A	E 19 12 3 L B 42		
DIN M. No.	1.4430		
EI 316LRS		Rutile type stainless steel electrode for welding austenitic stainless Cr-Ni-Mo steels or cast steels, having an extra low carbon content. For operating temperatures of up to 400°C. Especially suitable for welding of stainless steel chemical tanks and pipes in chemical, textile, paint, paper industries. Possible to use equally well both with AC and DC. Easy arc striking and re-striking. Fine metal droplet transfer, good fusion of joint faces, finely rippled flat and smooth bead surface, especially in fillet welds. Easy slag removal of slag.	 If required 2 Hour
AWS/ASME SFA - 5.4	E316L-17		
EN ISO 3581 - A	E 19 12 3 L R 32		
TS EN ISO 3581 - A	E 19 12 3 L R 32		
DIN M. No.	1.4430		
EIS 316		Rutile type, high recovery (160%) stainless steel electrode for welding 19Cr/12Ni/2-3Mo austenitic stainless steels to mild steels and low alloyed steels and also for surfacing applications on such steels. Weld metal deposit is austenitic-ferritic stainless steels. Possible to use equally well both with AC and DC. High current carrying capacity, since core wire is not made of stainless steel.	 If required 2 Hour
AWS/ASME SFA - 5.4	E316-26		
EN ISO 3581 - A	E 19 12 2 R 53		
TS EN ISO 3581 - A	E 19 12 2 R 53		
DIN M. No.	~1.4443		
EI 318		Rutile type stainless steel electrode for welding stabilized Cr-Ni-Mo austenitic stainless and cast steels. Suitable for using operating temperatures up to 400°C. Especially used for welding of stainless steels acid, salt and alkaline tanks, valves and pipes in chemical, textile, paint and paper industries. Possible to use equally well both with AC and DC. Easy arc striking and re-striking. Fine-droplet metal transfer, good wash-in of joint sides, easily removable slag.	 If required 2 Hour
AWS/ASME SFA - 5.4	E318-16		
EN ISO 3581 - A	E 19 12 3 Nb R 32		
TS EN ISO 3581 - A	E 19 12 3 Nb R 32		
DIN M. No.	1.4576		
EI 347		Rutile type stainless steel electrode for welding stabilized austenitic stainless Cr-Ni steels, and cast steels, as well as stainless or heat resisting chromium steels to cast steels. Stabilized with Nb (Niobium) and resistant to intergranular corrosion. Weld metal is suitable for operating temperatures up to 400°C, non-scaling up to 800°C. Especially suitable for welding of stainless steel tanks, valves and pipes in milk, beverage, food, chemical and petrochemical industries. Possible to use equally well both with AC and DC. Easy arc striking and re-striking. Fine metal droplet transfer, good fusion of joint faces, finely rippled bead surface, easily removable slag.	 If required 2 Hour

Stainless Steel Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EI 347B		Basic type stainless steel electrode for welding stabilized austenitic stainless Cr-Ni steels, and cast steels, as well as stainless or heat resisting chromium steels to cast steels. Stabilized with Nb (Niobium) and resistant to intergranular corrosion. Weld metal is suitable for operating temperatures up to 400°C, non-scaling up to 800°C. Especially suitable for welding of stainless steel tanks, valves and pipes in milk, beverage, food, chemical and petrochemical industries. Fine metal droplet transfer, good fusion of joint faces, finely rippled bead surface, easily removable slag.	 If required 2 Hour
AWS/ASME SFA - 5.4	E347-15		
EN ISO 3581 - A	E 19 9 Nb B 12		
TS EN ISO 3581 - A	E 19 9 Nb B 12		
DIN M. No.	1.4551		
EI 385		Rutile type fully-austenitic stainless steel electrode for welding of unstabilized or stabilized corrosion resisting Cr-Ni-Mo alloyed stainless steels like 904L/1.4539. Especially used in flue gas desulphurization plants, fertilizer plants, sea water transfer fittings, in petrochemical, paper and pulp industries, etc. Due to high Ni, Mo and low C content, weld metal have high resistant to intergranular, pitting, crevice and stress corrosion types in chloride containing solutions, phosphorus-, sulphur-, formic acids and sea water. Possible to use equally well both AC and DC. Easy arc striking and re-striking. Fine metal droplet transfer, good fusion of joints faces, finely rippled flat and smooth bead surface, especially in fillet welds. Easy slag removal of slag.	 If required 2 Hour
AWS/ASME SFA - 5.4	E385-16		
EN ISO 3581 - A	E 20 25 5 Cu N L R 12		
TS EN ISO 3581 - A	E 20 25 5 Cu N L R 12		
DIN M. No.	1.4539		
EIS 410		Basic type stainless steel electrode with high recovery, which is used for welding of approx. 13% Cr containing stainless and heat resistant chromium steels or cast steels. Deposits martensitic stainless steel weld metal. Also suitable for corrosion and abrasion resistant surfacing of contact surfaces of gas, water and steam fan, fan blades and fittings subjected to operating temperatures up to 450°C. Weld metal is non-scaling up to 850°C. Use with DCEP. Depending on type of base metal and wall thickness, preheating and interpass temperatures from 100 to 400°C and tempering at 650 to 750°C are advisable.	 If required 2 Hour
AWS/ASME SFA - 5.4	E410-15		
EN ISO 3581 - A	E (13) B 42		
TS EN ISO 3581 - A	E (13) B 42		
DIN M. No.	~1.4009		
EIS 410NiMo		Basic type stainless steel electrode with high recovery, which is used for welding of 12-14% Cr and 3-4% Ni containing stainless and heat resistant chromium steels or cast steels. Deposits martensitic stainless steel weld metal. Also suitable for corrosion and abrasion resistant surfacing of contact surfaces of gas, water, sea water and steam fan, fan blades and fittings in hydro-electric plants and continuous casting rolls. Used with DCEP. For wall thickness over 10 mm preheating to max. 150°C and after welding tempering or normalizing + tempering are recommended. Especially in joint welding a buffer layer with EI 312 or EIS 307 electrode is advisable.	 If required 2 Hour
AWS/ASME SFA - 5.4	E410NiMo-15		
EN ISO 3581 - A	E 13 4 B 42		
TS EN ISO 3581 - A	E 13 4 B 42		
DIN M. No.	1.4317		
EIS 430		Basic type electrode which provides 17% Cr containing ferritic stainless steel weld metal. Generally used for joining of stainless steels with similar composition and surfacing of seating surfaces of steam, water and gas valves, which are made of stainless steels. Also used for corrosion resistant build-up, buffer or wear resistant surfaces on Cr containing steels and stainless steels. Preheating and interpass temperature shall be 200 - 300 °C and post weld heat treatment at 730 - 800 °C is necessary.	 If required 2 Hour

STICK ELECTRODES

Stainless Steel Electrodes

Product Name and Standards	Applications and Properties	Polarity Welding Positions Re-drying Information
EI 2209 AWS/ASME SFA - 5.4 EN ISO 3581 - A TS EN ISO 3581 - A DIN M. No. E2209-16 E 22 9 3 N L R 12 E 22 9 3 N L R 12 ~1.4462	Electrode for welding duplex (ferritic-austenitic) stainless Cr-Ni-Mo steels. Especially used in welding of acid tanks and pipes, in chemical, petrochemical, paper, shipbuilding and desalination industries. Suitable also for welding duplex stainless steels to carbon steels. The delta-ferrite content of the as-deposited weld metal amounts to approx. 25 to 35 %. The high-strength and ductile weld metal exhibits good resistance to pitting, crevice corrosion and stress corrosion cracking in chloride-bearing media. For operating temperatures of up to 250°C. Possible to use equally well both with AC and DC. Fine metal droplet transfer, good fusion of joint faces, finely rippled bead surface, easy arc striking, restriking and slag removal.	   If required 2 Hour

Aluminium Alloy Electrodes

Product Name and Standards	Applications and Properties	Polarity Welding Positions Re-drying Information	
EAL 1100 AWS/ASME SFA - 5.3 EN ISO 18273 TS EN ISO 18273 TS 9604 DIN M No.	E1100 E AI 1080 A(AI 99,8) E AI 1080 A(AI 99,8) EL-AI99.5 3.0286	Special coated electrode for welding pure aluminium. Weld metal has good color matching with base metal and high electrical conductivity. Hold the electrode perpendicularly to workpiece, with a short arc length, during welding. If the thickness is greater than 10 mm or in large workpieces, preheating shall be applied between 150°C to 250°C. Since slag residues are corrosive, they must be completely removed from the weld bead. Electrode serves well as consumable in oxyacetylene welding. The covering being hygroscopic, electrodes must be stored in an absolutely dry location, or redried if required.	<

STICK ELECTRODES

Copper Alloy Electrode

Product Name and Standards	Applications and Properties	Polarity Welding Positions Re-drying Information
ECU Sn7 AWS/ASME SFA - 5.6 DIN 1733 ~ ECuSn-C EL-CuSn7	Electrode for joining and surfacing of pure copper and copper alloys and also surfacing of steels, cast steels, grey cast iron such as piston arms, sprockets, guides, turbine and centrifugal blades, ship screw propellers, motor collectors etc. For surfacing application, the initial runs should be welded at the lowest possible amperage. To obtain the typical mechanical properties, preheat the workpiece to 350°C and maintain this heat throughout the welding operation.	   If required 2 Hour

Nickel Alloy Electrodes

Product Name and Standards	Applications and Properties	Polarity Welding Positions Re-drying Information
ENI 422 AWS/ASME SFA - 5.11 EN ISO 14172 TS EN ISO 14172 DIN M No. ENiCrFe-3 E Ni 6182 E Ni 6182 2.4620	Basic coated electrode with Ni-Cr-Fe type nickel base deposit. Used for repairing and joining of nickel alloys, 5 - 9% Nickel steels, cryogenic stainless steels down to -196°C, Incoloy 800 and other high temperature steels. Provides a weld metal which has a operating temperatures from -196°C to 800°C. Used for joining dissimilar materials as stainless steels/low alloyed steels, stainless steels/Nickel alloys, buffering of difficult to weld steels. Weld metal deposit is insensitive to cracks, has very good resistance to acids, salts and alkaline solutions, molten salt (e.g. cyanide) in oxidizing and carburization atmospheres (avoid a sulphurous atmosphere). Generally used for welding on oven parts, burners, heat treatment equipment, cement works, moulds, transport and storage tanks of liquid gas. Has a wide range of application in chemical industry, petrochemical industry, glassworks, civil engineering, repairing and maintenance workshops.	   If required 2 Hour
ENI 424 AWS/ASME SFA - 5.11 EN ISO 14172 TS EN ISO 14172 ~ENiCrMo-4 E Ni 6275 E Ni 6275	Heavy coated, high recovery (170%) surfacing and hard surfacing electrode which gives Nickel-Chromium-Molibdenum alloy weld metal. Weld metal is resistant to abrasion, impact, corrosion and high temperatures. Especially used in welding of hot-work press tools which are subjected to above service conditions. Suitable to use in maintenance welding of hot-work press tools and hammers, forging and extrusion dies and parts, pressure casting pistons and dies, rolling rolls, hot-stripping tools, pump rotors and valves. Preheating to 400-500°C is required, depending on the size, shape and chemical analysis of the part to be welded. Has a stable arc, smooth weld bead surface and weld metal is free of cracks and porosity. Welding shall be performed with short stick-out distance, perpendicular to base metal and craters shall be filled well. Preferred to use with DC, electrode in positive (+) and possible to use also in AC.	   If required 2 Hour
ENI 440 AWS/ASME SFA - 5.11 EN ISO 14172 TS EN ISO 14172 DIN M No. ENiCu-7 E Ni 4060 E Ni 4060 2.4366	Electrode having monel core wire, designed for joining and surfacing welds of Monel-clad steels. Suitable for joining Monel alloys to steel weld surfacing of steel with corrosion-resistant Monel coating. The weld metal is free of porosity and resistant to many chemicals. Suitable for applications with working temperatures from -196°C to 450°C. Weld groove preparation and cleaning should be done carefully. Generally welding should be done in horizontal position with short stick-out distance without weaving. Due to porosity risk of the weld metal, welding and striking shall be started on end plate. Possible to use with DCEP.	   If required 2 Hour

STICK ELECTRODES

Electrodes for Cast Irons

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
ENI 400 (Ni)		Electrode having a pure nickel core wire, designed for the welding of cast iron with preheat. Suitable for welding grey cast iron, white and grey malleable cast iron, nodular cast iron. For repairing cracked and worn castings or joining cast iron parts to components made of steel, copper and nickel materials. Provides easy arc striking, restriking and stable arc. Weld metal is machinable. Weld short beads (approx. 30 to 50 mm long). For reducing weld residual stresses, hammer peen welds before cooling. Preferably used with DCEP but possible to use also with AC.	   If required 1 Hour
AWS/ASME SFA - 5.15	ENi-CI		
EN ISO 1071	E C Ni-CI 3		
TS EN ISO 1071	E C Ni-CI 3		
ENI 402 (Ni)		Electrode having a pure nickel core wire for welding cast iron without or with low preheating (max. 300°C). Suitable for welding cast iron with lamellar graphite, white and black heart malleable and nodular cast iron. Used also for repair welding of cracked cast iron parts or joining components made of steel, copper or nickel materials to cast irons. Weld metal is machinable. Provides easy arc striking and restriking, stable arc and smooth bead surface. Weld short beads, about 30 to 50 mm long. In order to reduce weld residual stresses, hammer-peen welds slightly before cooling. Preferably used with DCEP but possible to use also with AC.	   If required 1 Hour
AWS/ASME SFA - 5.15	ENi-CI		
EN ISO 1071	E C Ni - CI 3		
TS EN ISO 1071	E C Ni - CI 3		
ENI 404 (Mo)		Electrode having a nickel-copper core wire for welding cast iron with preheating. Iron admixture from base metal should be kept low. Well-suited to welding cast iron with lamellar graphite, white, and black heart malleable cast iron, nodular cast iron. Weld metal closely matches colour of base metal. Thus electrode is preferably used for making filler and cover passes or for filling-up shrinkage cavities. Provides easy arc striking and restriking and stable arc. Weld metal is machinable. Weld short beads, about 30 to 50 mm long. In order to reduce weld residual stresses, hammer-peen welds slightly before cooling.	   If required 1 Hour
AWS/ASME SFA - 5.15	ENiCu-B		
EN ISO 1071	E C NiCu-B 3		
TS EN ISO 1071	E C NiCu-B 3		
ENI 406 (Mo)		Electrode having a nickel-copper core wire for welding cast iron without or with low preheating (up to 300°C). Well-suited to welding cast iron with lamellar graphite, white and black heart malleable cast iron, nodular cast iron. Weld metal closely matches colour of base metal. Electrode is preferably used for making filler and cover passes of for filling-up shrinkage cavities. Weld metal is machinable. Provides easy arc striking and restriking, stable arc, smooth bead surface. Weld short beads, about 30 to 50 mm long. In order to reduce weld residual stresses, hammer-peen welds slightly before cooling.	   If required 1 Hour
AWS/ASME SFA - 5.15	ENiCu-B		
EN ISO 1071	E C NiCu-B 3		
TS EN ISO 1071	E C NiCu-B 3		
ENI 412		Electrode having a nickel core wire, for welding on grey cast iron with and without preheating. Suitable for welding joints as well as for surfacing of worn cast iron parts. Suitable to use in repair of machine frames, machine housings, machine parts and bearing blocks. The electrode has a very soft, regular fusion, and a quiet and steady arc. It is well suited for positional welding. Very little dilution with the parent metal takes place, resulting in good machinability of the transition area. Weld short beads, about 30 to 50 mm long. In order to reduce weld residual stresses, hammer-peen welds slightly before cooling. Preferably is used with DCEN but possible to use with also AC.	   If required 1 Hour
AWS/ASME SFA - 5.15	ENi-CI

STICK ELECTRODES

Electrodes for Cast Irons

Product Name and Standards	Applications and Properties	Polarity Welding Positions Re-drying Information
ENI 416 (NiFe) AWS/ASME SFA - 5.15 EN ISO 1071 TS EN ISO 1071 ENiFe-CI E C NiFe-CI 3 E C NiFe-CI 3	Electrode having a nickel-iron core wire, for welding cast iron with or without preheating. The weld metal features a low coefficient of thermal expansion and as a result, little shrinkage. It has higher strength properties than pure nickel weld metal and is therefore preferably used for welding nodular cast iron, white and black heart malleable cast iron, as well as austenitic nodular cast iron or joining these metals to components made of steel, copper or nickel materials. Easy arc striking and restriking, stable arc, smooth bead. Weld metal is machinable. Weld short beads.	

Hardfacing Electrodes

Product Name and Standards	Applications and Properties		Polarity Welding Positions Re-drying Information
EH 245 AWS/ASME SFA - 5.13 EN ISO 14700 TS EN ISO 14700 DIN 8555	E FeMn-A E Fe9 E Fe9 E 7-UM-200-KP	Basic covered, austenitic manganese steel electrode for wear resisting hardfacing deposits on high manganese (12-14%) steels. Weld metal will adopt high hardness by cold-working, it is therefore particularly suited for parts which are subjected mainly to wear caused by heavy impact and shock. During welding, the workpieces should not become too hot and if necessary, be allowed to cool down. When welding large workpieces made of austenitic manganese steel, such as crusher jaw plates, it is advisable to weld them in a water bath. Welding shall be done at low welding currents, with stringer and short bead lengths, to avoid the workpiece cool down. So, high welding currents and wide-weave beads must be avoided. When building up various layers, it is good practice depositing a buffer layer with EI 307 weld metal. When making joint welds on austenitic manganese steel, it is preferable to use EI 307B electrodes. Suitable for hardfacing and repair welding of wear resisting parts made of austenitic manganese steel, such as crusher jaw plates, crusher cones, rolls, pulverizing hammers, beating arms and others. Preferably used with DC, electrode in positive (+) pole and also possible to use with AC.	350°C If required 2 Hour
EH 247 AWS/ASME SFA - 5.13 AWS/ASME SFA - 5.13 EN 14700 TS EN 14700 DIN 8555	EFeMn-C ~EFeMn-A E Z Fe9 E Z Fe9 ~E 7-UM-200-KP	High recovery (120%), austenitic manganese steel electrode for hardfacing and joining of high manganese steels. Due to it excellent impact resistance, particularly suited for parts which are subjected to heavy impact, shock and cavitation. The addition of Ni and Cr alloys, increases the resistance against cracks and abrasion. Weld metal work hardens by cold-working. During welding, the workpieces should not become too hot and it shall be cool down, when necessary. High welding currents and wide-weave beads must be avoided. Machining is possible with tungsten carbide tipped tools. Suitable for hardfacing and repair welding of dredge pumps, hydraulic press pistons, crane wheels, rail crossings, crusher jaws, excavator and grab teeth, mill hammers, rock crusher.	350°C If required 2 Hour
EH 250 AWS/ASME SFA - 5.13 EN 14700 TS EN 14700 DIN 8555	~E FeMnCr E Z Fe9 E Z Fe9 E 7-UM-250-KPR	High recovery (140%), austenitic manganese steel electrode for joining and hardfacing of high manganese steels which are subjected to very high pressure, shocks and abrasion. It is suitable to use as a buffer layer prior to hardfacing. Due to it is 12% Cr content, weld metal has high crack resistance and abrasion resistance with respect to other manganese steel electrodes. Weld metal work hardens by cold-working. Workpiece shall not become too hot during welding and when necessary, it shall be cool down before next hardfacing passes. High welding currents and wide-weave beads must be avoided. When welding large workpieces made of austenitic manganese steels, it is advisable to weld them in a water bath. Suitable for hardfacing and repair welding of dredge pumps, hydraulic press pistons, crane wheels, rail crossings, crusher parts subjected to impact of soft minerals.	350°C If required 2 Hour

Hardfacing Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EH 330			
EN 14700 TS EN 14700 DIN 8555	E Fe1 E Fe1 E 1-UM-300-P	Thick basic-covered electrode for producing hardfacing deposits of medium hardness, which can be machined by chip-forming. Particularly suited for wear resisting parts subjected to metal-to-metal wear, heavy impact and shock. EH 330 can be easily welded in all positions, except vertical-down. Weld metal is crack resistant and free of pores. Suitable for reconditioning of rails, rail crossings, switch points, sprockets and wearing parts, such as rope pulleys, tumblers, rollers, caterpillar track rollers and links, wheel flanges, stud links and others. DC, electrode in positive (+) is preferred and possible to use also in AC.	 If required 2 Hour
EH 340			
EN 14700 TS EN 14700 DIN 8555	E Fe1 E Fe1 E 1-UM-400-P	Thick basic-covered electrode for producing highly wear resisting hardfacing deposits. It is particularly resistant to metal-to-metal wear, impact and shock. Suitable for reconditioning of rails, rail crossings and switch points, wearing parts such as dredger parts, polygon edges, bearing surfaces, striking tools, die tyres, wheel flanges, slide surfaces subject to heavy wear, reconditioning of lower dies, punches and others. Weld metal can be machined only by using sintered hard metal tipped tools. Even a large number of layers can be deposited without the need of intermediate buffer layers. A tough buffer layer using ESB 40 or EI 307B electrodes is solely required in case of very crack sensitive base metal. EH 340 can be welded in all positions, except vertical-down. Preferred to use with DC, electrode in positive (+) pole and also possible to use with AC.	 If required 2 Hour
EH 350			
EN 14700 TS EN 14700 DIN 8555	E Z Fe2 E Z Fe2 ~E 2-UM-50-GP	Thick basic-covered electrode for producing wear resisting hardfacing deposits, which is particularly resistant to metal-to-metal wear, impact and abrasion. Suitable for reconditioning of rails, rail crossings and switch points, wearing parts such as dredger parts, polygon edges, bearing surfaces, striking tools, die tyres, wheel flanges, slide surfaces subject to heavy wear, reconditioning of lower dies, punches, cutting blades, table and rolling rolls. Weld metal can be machined only by using sintered hard metal tipped tools. A tough buffer layer using ESB 40 or EI 307B electrodes is solely required in case of very crack sensitive base metal. Can be welded in all positions, except vertical-down. Preferred to use with DC, electrode in positive (+) pole and also possible to use with AC.	 If required 2 Hour
EH 360R			
EN 14700 TS EN 14700 DIN 8555	E Fe8 E Fe8 E 6-UM-60-GPT	Thick rutile-covered electrode for depositing tough and wear resisting hardfacing overlays. It is particularly resistant to high metal-to-metal wear, moderate impact and abrasion. The weld metal has sufficient red hardness up to 600°C. It is machinable only by grinding. Suitable hardfacing applications where wear resistance at higher temperatures is a prime concern, as in hot cut offs, dies for pressure castings, rolls, crushers excavator parts, bucket edges and bucket teeth, drilling bits, coal planes, conveyor screws. In case of crack sensitive base metals, a tough buffer layer made by ESB 40 or EI 307B electrodes, is required and a further one after every third hardfacing layer. The as-welded hardness of 59 HRC can be increased to 60-65 HRC by single or double tempering. Possible to use equally well both with AC and DC.	 If required 2 Hour
EH 360B			
EN 14700 TS EN 14700 DIN 8555	E Fe8 E Fe8 E 6-UM-60-GPT	Thick basic-covered electrode for depositing tough and wear resisting overlays on structural members, subjected to severe wear. It is particularly resistant to high metal-to-metal wear, moderate impact and abrasion. The weld metal has sufficient red hardness up to 600°C. It can be machined only by grinding. Suitable hardfacing applications where wear resistance at higher temperatures is a prime concern, as in hot cut offs, dies for pressure castings, rolls, crushers excavator parts, bucket edges and bucket teeth, drilling bits, coal planes, conveyor screws. Multi-layers deposits will be free of cracks, even without depositing intermediate buffer layers. Only in case of very crack sensitive base metals, a tough buffer layer, made with ESB 40 or EI 307B electrodes, is required. Preferred to use with DC, electrode in positive (+) pole and also possible to use with AC.	 If required 2 Hour

Hardfacing Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EH 360Si		Thick basic-covered electrode for depositing wear resisting overlays on structural members subjected to severe abrasive wear. Weld metal can be machined only by grinding. Suitable for hardfacing applications of crushing and grinding of coal, mineral, soil, rocks, excavator parts, bucket edges and bucket teeth, drilling bits, coal planes, conveyor screws. In case of very crack sensitive base metals, a tough buffer layer, made with ESB 40 or EI 307B electrodes, is required, before hardfacing. Preferred to use with DC, electrode in positive (+) pole and also possible to use with AC.	   If required 2 Hour
EN 14700 TS EN 14700 DIN 8555	E Z Fe2 E Z Fe2 ~E 2-UM-60-G		
EH 380		Hardfacing electrode for manufacturing and repair welding of turning and planing chisels, reaming and shear blades, special spiral drills. Also suitable for manufacturing tools from unalloyed and low alloy steels and hardfacing the edges of cutting tools made of tool steel. Unalloyed and low alloy steels shall be preheated to 250-400°C before welding and postweld heat treatment at 400°C and then welded parts shall be cooled slowly. If buffer layer is needed, can be performed by EI 312 or EI 307B electrodes (max. 2,5 mm) and then hardfacing can be performed by EH 380 (max. 5 mm in height). Possible to use with DC, electrode in positive (+) pole and with AC.	   If required 2 Hour
AWS/ASME SFA - 5.13 EN 14700 TS EN 14700 DIN 8555	E Fe6 E Fe4 E Fe4 E 4-UM-60-ST		
EH 382		Basic coated electrode for build-up and hardfacing of parts subjected to high metal-or-metal wear, compression, impact at elevated temperatures. Weld metal is resistant to operating temperatures up to 550° C. Due to it's high strength, toughness and heat resistance ideally suited for hot and cold cutting tools, hot shears blades, forging dies, saddles, hammers, die cast moulds. Electrode can also be used for production of new hot and cold cutting tools and their edges, which are made of low alloy steels. Has a stable arc, good bead appearance and very easy slag removal.	   If required 2 Hour
EN 14700 TS EN 14700 DIN 8555	E Fe3 E Fe3 E 3-UM-45-ST		
EH 384		Rutile coated electrode for build-up and hardfacing of parts subjected to high metal-or-metal wear, compression, impact at elevated temperatures. Weld metal is resistant to operating temperatures up to 600° C, because of it's Cr, Mo, W, V content. Due to it's high strength, toughness and heat resistance ideally suited for hot forging dies, saddles, hammers, hot and cold cutting tools, hot shears blades and rolling mills. Electrode can also be used for production of new hot and cold cutting tools and their edges, which are made of low alloy steels. Has a stable arc, good bead appearance and very easy slag removal.	   If required 2 Hour
EN 14700 TS EN 14700 DIN 8555	E Fe3 E Fe3 E 3-UM-60-ST		
EH 515		High recovery (160%), thick rutile-covered electrode depositing hypereutectic chromium hard metal. It is suitable for producing highly wear resisting deposits subject to abrasion by mineral particles. Suitable for hardfacing worn parts subject to mineral abrasion, such as, conveyor screws, mixer blades, concrete pump parts, slurry pumps, stirring and agitator parts, crusher parts, excavator bucket edges, coal planes and worn parts in petrochemical industry, which are subject to corrosion at elevated temperatures. The typical transverse cracks appearing in this hardfacing weld metal are not detrimental to abrasion resistance. Weld metal is machinable only by grinding. On difficult-to-weld steels, a buffer layer made with EIS 307 electrodes is required. Produces very smooth and clean weld beads with flat penetration. Possible to use both with AC and DC.	   If required 2 Hour
EN 14700 TS EN 14700 DIN 8555	E Fe14 E Fe14 E 10-UM-60-CGRZ

Hardfacing Electrodes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
EH 528			
EN 14700 TS EN 14700 DIN 8555	E Fe15 E Fe15 E 10-UM-65-GR	Basic type, high recovery (180%) electrode for depositing primary and eutectic Cr and Nb carbides in austenitic matrix. Suitable for hardfacing of parts, subjected to heavy abrasion with moderate impact. Service temperature is max. 450°C. Suitable to use in hardfacing of cement crushers, cement presses and brick conveyor screws, mixer blades, press screws in oil industry, bucket lips and teeths in earth moving equipments. The typical transverse cracks occurring in such a hard metal is not suitable for applications where impact and shock conditions prevail. Wear coefficient of one layer deposit is 0.5 % with SiO ₂ . The weld metal is machinable only by grinding. Weld with long arc length and shall not be welded more than 2 layers. Possible to use with both DC and AC.	 If required 2 Hour
EH 531			
EN 14700 TS EN 14700 DIN 8555	E Fe15 E Fe15 E 10-UM-65-GR	Heavy coated, high recovery (235%) hardfacing electrode, depositing evenly distributed Cr and B-carbides in austenitic stainless steel matrix. Required hardness and abrasion resistance can be obtained in the first layer even on low alloy steels. Suitable for hardfacing of parts subjected to heavy abrasion with moderate impact. Particularly used in excavator teeth, leading edges of excavator buckets, mixer blades, gravel pumps, cement fans, conveyor worn-screws, conveyor belts. The typical transverse cracks occurring in such a hard metal is not suitable for applications where impact and shock conditions prevail. The hardfacing layers have a very smooth surface and machinable only by grinding. Possible to use with both DC and AC.	 If required 2 Hour
EH 540			
EN 14700 TS EN 14700 DIN 8555	E Fe16 E Fe16 E 10-UM-65-GRZ	Basic type, high recovery (235%) hardfacing electrode for depositing primary and eutectic Cr, Nb, Mo, W and V-carbides in austenitic matrix. Suitable for hardfacing of parts subjected to heavy abrasion with moderate impact and service temperatures up to 600°C. Suitable for use in crushing and screening plants, sinter plant parts, wear bars and plates, scraper bars, blast furnace charging systems, cement furnaces, bucket teeth and lips. The typical transverse cracks occurring in such a hard metal is not suitable for applications where impact and shock conditions prevail. Wear coefficient of 1 layer deposit is 0,3% with SiO ₂ . The weld metal is machinable only by grinding. It has a quiet and regular fusion. Weld with long arc length and shall not be welded more than 4 layers. Possible to use with both DC and AC.	 If required 1 Hour
EH 801			
AWS/ASME SFA - 5.13 EN 14700 TS EN 14700 DIN 8555	ECoCr-C E Co3 E Co3 E 20-UM-55-CSTZ	Rutile-basic coated hardfacing electrode which deposits Co-Cr-W alloy weld metal. Suitable to use in hardfacing of parts subjected to either the single or combined effect of: heavy metal-to-metal wear or abrasion, high temperatures (ranging from 500°C to 900°C) and corrosive environments. Due to its very high hardness it is recommended for applications where shocks are low or moderate. Suitable for rolling mill guides, extrusion dies, valve seats, mechanical parts of steam turbines, pump tubing and shafts and mixer blades. Preferred to use with DC, electrode in positive (+) and possible to use with also AC.	 If required 1 Hour
EH 806			
AWS/ASME SFA - 5.13 EN 14700 TS EN 14700 DIN 8555	ECoCr-A E Co2 E Co2 E 20-UM-40-CTZ	Rutile-basic type coated hardfacing electrode which deposits Co-Cr-W alloy weld metal. Suitable to use in hardfacing of parts subjected to either the single or combined effect of: heavy metal-to-metal wear or abrasion, high temperatures (ranging from 500°C to 900°C) and corrosive environments. Due to its very higher toughness and shock resistance extends its use for service conditions involving mechanical impacts and thermal shocks. Suitable for blades for hot shearing, ingot tong ends, glass moulds, valves and valve seats, nozzles. Preferred to use with DC, electrode in positive (+) and possible to use with also AC.	 If required 1 Hour

STICK ELECTRODES

Hardfacing Electrodes

Product Name and Standards	Applications and Properties	Polarity Welding Positions Re-drying Information
EH 812 AWS/ASME SFA - 5.13 EN 14700 TS EN 14700 DIN 8555	Rutile-basic type coated hardfacing electrode which deposits Co-Cr-W alloy weld metal. Suitable to use in hardfacing of parts subjected to either the single or combined effect of: heavy metal-to-metal wear or abrasion, high temperatures (ranging from 500°C to 900°C) and corrosive environments. Due to its very higher toughness and shock resistance extends its use for service conditions involving mechanical impacts and thermal shocks. Suitable for plastic extrusion screws, tools to cut paper, cardboard floor coverings, roofing, wood, galvanizing baths. Preferred to use with DC, electrode in positive (+) and possible to use with also AC.	 If required 1 Hour

Cutting and Gouging Electrodes

Product Name and Standards	Applications and Properties	Polarity Welding Positions Re-drying Information
ECUT	Electrode used for cutting, bevelling and piercing works. Particularly suitable for cutting industrial metals like steels, cast irons, non-ferrous metals and also metals which are difficult or impossible to cut with oxyacetylene process. Suitable for cleaning faulty welding places and defective surfaces at high speed and in all positions. Electrode should be definitely not left to dry, but should contain certain amount of dampness. Possible to use in DCEN or DCEP. DCEN provides higher metal removal speed.	
ECUT-S	Electrode especially used for all cutting, gouging, bevelling and piercing purposes. Particularly suitable for cutting industrial metals like steels, cast irons, non-ferrous metals and also metals which are difficult or impossible to cut with oxyacetylene process. Resulted surface finish is very clean and smooth. ECUT-S should be definitely not left to dry, but should contain certain amount of dampness. DCEN provides higher metal removal speed.	
EC 900	Electrode used for gouging and piercing works. Suitable for cleaning faulty welding places, defective surfaces and back-gouging on steels, cast iron, non-ferrous metals. The depth of the groove cut at one gouging should not exceed the diameter of the electrode. For cutting deep gouges the operation should be repeated several times. Electrode should be definitely not left to dry, but should contain certain amount of dampness. Preferred to use in DCEN due to its higher metal speed.

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Unalloyed Steel TIG and Oxy-Acetylene Welding Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
OG 1		Low carbon steel welding rod for oxy-acetylene welding. It is a general purpose rod for welding low carbon steels and wrought iron with the required tensile strength does not exceed 310 N/mm ² . Generally used for automotive repair works like tears and rips in the body or patching on badly damaged parts, joining steel sheets and plates, tubing and piping installation where and intense heat source is required for straightening, forming, preheating post weld heat treatment, regardless of the complexity and position in which welding has to be done. Weld metal has got good ductility and machinability. Welding shall be performed in neutral flame characteristics. It has got a fluid weld puddle.	
AWS/ASME SFA - 5.2	R45		
EN 12536	O I		
TS 3623 EN 12536	O I		
OG 2		Low carbon steel welding rod, for oxy-acetylene gas welding, containing slightly higher manganese. It is a general purpose welding rod with medium strength, used for welding carbon steels and low alloy steels with tensile strengths up to 410 N/mm ² . Commonly used for carbon steel pipe installation and repair works in power plants, process piping, machine and agricultural tool repair, joining steel plates and wrought irons, filling holes and edged on wrought iron, where an intense heat source is required for straightening, forming, preheating post weld heat treatment, regardless of the complexity and position in which welding has to be done. Welding shall be performed in neutral flame characteristics. It has got a fluid weld puddle.	
AWS/ASME SFA - 5.2	R 60		
EN 12536	O II		
TS 3623 EN 12536	O II		
TG 1		GTA (TIG) welding rod for unalloyed steels, fine grained steels and pipes. Particularly suitable for welding of galvanized and pre-painted steels, welding low alloy steels in pipe-lines, boilers and tank production. Used in root and cap passes in chemical, petrochemical, water, natural gas pipes joints safely. Suitable also welding in thin metal plates and repair welds. Characterized by a reduced slag formation and smooth welding deposit. Thin and homogeneous copper coating increase resistance to rusting.	 
AWS/ASME SFA - 5.18	ER70S-3		
EN ISO 636 - A	W 42 3 2Si		
TS EN ISO 636 - A	W 42 3 2Si		
DIN M. No.	1.5112		
TG 2		GTA (TIG) welding rod for unalloyed steels, fine grained steels and pipes. Particularly used in root and cap passes in chemical, petrochemical, water, natural gas pipes joints safely. Suitable also welding of thin metal plates, tanks, boilers and repair welds of them. Thin and homogeneous copper coating increase resistance to rusting.	 
AWS/ASME SFA - 5.18	ER70S-6		
EN ISO 636 - A	W 46 2 3Si1		
TS EN ISO 636 - A	W 46 2 3Si1		
DIN M. No.	1.5125		
TG 3		GTA (TIG) welding rod for unalloyed steels, fine grained steels and pipes. Provides high mechanical properties. Particularly used in root and cap passes in chemical, petrochemical, water, natural gas pipes joints safely. Suitable also welding of thin metal plates, tanks, boilers and repair welds of them. Thin and homogeneous copper coating increase resistance to rusting.	 
AWS/ASME SFA - 5.18	ER70S-6

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Low-Alloyed, High Strength and Creep Resistant Steel Welding TIG Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
TG 235 AWS/ASME SFA - 5.28 EN ISO 21952 - A TS EN ISO 21952 - A DIN M. No.		Medium-alloyed GTA (TIG) welding rod for Cr-Mo alloyed creep resisting steels, subjected to operating temperatures up to 650°C. Suitable for welding 12 CrMo19-5, P5 / T5 steels in power generation and petrochemical industries. Due to it's high steam and hot hydrogen corrosion resistance, particularly used in root and cap passes of in steam generators, boilers, piping in refineries, where high X-ray quality is required. Observe directions of pre- and post-weld heat treatment of base metal.	 
TG 285 AWS/ASME SFA - 5.28 EN ISO 21952 - A TS EN ISO 21952 - A		9Cr- 1Mo alloyed GTA (TIG) welding rod for creep resisting steels, subjected to operating temperatures up to 600°C. Suitable for welding P9 / T9 steels in power generation and petrochemical industries. Due to it's high steam and hot hydrogen corrosion resistance, particularly used in root and cap passes of in steam generators, boilers, pressure vessels and piping in refineries, where high X-ray quality is required. Observe directions of pre- and post-weld heat treatment of base metal.	 
TG 295 AWS/ASME SFA - 5.28 EN ISO 21952 - A TS EN ISO 21952 - A DIN M. No.		High-alloyed, GTA (TIG) welding rod for creep, oxidation and corrosion resistant Cr-Mo-V-Nb alloyed steels, subjected to operating temperatures in 650°C. Suitable for welding P91 and T91 steels used in steam generators, turbine rotors, boiler, piping in refineries, chemical industry and thermal power generation industry. Due to it's high steam and hot hydrogen corrosion resistance, particularly used in root and cap passes of in steam generators, boilers, pressure vessels and piping in refineries, where high X-ray quality is required. Observe directions of pre- and post-weld heat treatment of base metal.

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Stainless Steel TIG Welding Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
TI 307Si		Austenitic stainless steel wire rod for GTA (TIG) welding of dissimilar steels, difficult to weld steels, armour plates, high manganese steels, rails, crossovers. Suitable also for depositing stress relaxing buffer layers on crack sensitive base metals and hard surfacing jobs, e.g. crane wheels, cutting blades and dies where high degree of pressure and dynamical loads exists. Weld metal has a high degree of corrosion resistance and resistant to operating temperatures up to 300°C and non-scaling up to 850°C. Depending on chemical composition of base metal, proper welding procedure, preheating and interpass temperatures shall be applied by also avoiding high admixture of base metal.	 
AWS/ASME SFA - 5.9	~ER307		
EN ISO 14343 - A	W 18 8 Mn		
TS EN ISO 14343 - A	W 18 8 Mn		
DIN M. No.	1.4370		
TI 308L		Austenitic stainless steel welding rod for GTA (TIG) welding of unstabilized or stabilized corrosion resisting Cr-Ni steels. Used in tank, pipe, equipment welding in food, beverage, chemical and pharmaceutical industries. Resistant to intergranular corrosion up to 350°C. Non-scaling up to 800°C, in air or oxidizing combustion gases.	 
AWS/ASME SFA - 5.9	ER308L		
EN ISO 14343 - A	W 19 9 L		
TS EN ISO 14343 - A	W 19 9 L		
DIN M. No.	1.4316		
TI 308LSi		Austenitic stainless steel welding rod for GTA (TIG) welding of unstabilized or stabilized corrosion resisting Cr-Ni steels. Used in tank, pipe, equipment welding in food, beverage, chemical and pharmaceutical industries. Therefore, the increased Silicon (Si) promotes weld pool fluidity and smoother weld bead appearance. Resistant to intergranular corrosion up to 350°C. Non-scaling up to 800°C, in air or oxidizing combustion gases.	 
AWS/ASME SFA - 5.9	ER308LSi		
EN ISO 14343 - A	W 19 9 LSi		
TS EN ISO 14343 - A	W 19 9 LSi		
TI 309L		Austenitic-ferritic wire electrode for GTA (TIG)-welding of stainless steels to unalloyed or low-alloyed steels, subject to operating temperatures up to 300°C. Low carbon content increases resistance to intergranular corrosion. Suitable to use also as buffer layer on carbon steel before welding with 308 and 308 L to reach 304 and 304L surface layer.	 
AWS/ASME SFA - 5.9	ER309L		
EN ISO 14343 - A	W 23 12 L		
TS EN ISO 14343 - A	W 23 12 L		
DIN M. No.	1.4332		
TI 309LSi		Austenitic-ferritic wire electrode for GTA (TIG)-welding of stainless steels to unalloyed or low-alloyed steels, subject to operating temperatures up to 300°C. Low carbon content increases resistance to intergranular corrosion. Suitable to use also as buffer layer on carbon steel before welding with 308 and 308 L to reach 304 and 304L surface layer. The higher silicon content improves the welding properties, such as wetting and smoother weld bead appearance.

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Stainless Steel TIG Welding Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
TI 310			
AWS/ASME SFA - 5.9	ER310	Fully austenitic welding rod for GTA (TIG) welding of heat resisting steels containing approximately 25% chromium and 20% nickel which are used in heat treatment and industrial furnaces and equipments, like cement and steel industries. Also suited for welding heat resisting and non-scaling ferritic chromium steels, provided that corrosion attack by reducing sulphur bearing combustion gases is not to be expected. Non-scaling up to 1200°C. Weld metal exhibits good toughness values down to -196°C.	 
EN ISO 14343 - A	W 25 20		
TS EN ISO 14343 - A	W 25 20		
DIN M. No.	1.4842		
TI 312			
AWS/ASME SFA - 5.9	ER312	Austenitic-ferritic stainless steel wire electrode for TIG welding of dissimilar steels and depositing buffer layers on ferritic steels. It features high resistance to cracking and toughness, is therefore suited for joining difficult to weld steels and depositing stress-relaxing buffer layers on crack sensitive base metals. Weld metal is non-scaling up to 1100°C. Especially used in die and tool repair, crack repairs in difficult to weld steels, gear teeth repair and rebuilding, buffer layer application on cutting blades. Suitable also for welding galvanized steel plates.	 
EN ISO 14343 - A	W 29 9		
TS EN ISO 14343 - A	W 29 9		
DIN M. No.	1.4337		
TI 316L			
AWS/ASME SFA - 5.9	ER316L	Austenitic stainless steel welding rod for GTA (TIG) welding of unstabilized or stabilized high corrosion resisting Cr-Ni-Mo stainless steels. Due to its low C (carbon) content, resistant to intergranular corrosion up to 400°C. Especially used in welding chemical tanks, pipes and equipments which are used in chemical, petrochemical, paint, paper and shipbuilding industries, etc.	 
EN ISO 14343 - A	W 19 12 3 L		
TS EN ISO 14343 - A	W 19 12 3 L		
DIN M. No.	1.4430		
TI 316LSi			
AWS/ASME SFA - 5.9	ER316LSi	Austenitic stainless steel welding rod for GTA (TIG) welding of unstabilized or stabilized high corrosion resisting Cr-Ni-Mo stainless steels. Due to its low C (carbon) content, resistant to intergranular corrosion up to 400°C. Especially used in welding chemical tanks, pipes and equipments which are used in chemical, petrochemical, paint, paper and shipbuilding industries, etc. The higher silicon content improves the welding properties, such as wetting and smoother weld bead appearance.

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Stainless Steel TIG Welding Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
TI 347			
AWS/ASME SFA - 5.9	ER347	Stabilized austenitic stainless steel welding rod for GTA (TIG) welding of unstabilized and stabilized corrosion resisting Cr-Ni steels. Generally used for welding pipes, tanks and equipments in food, beverage, chemical and pharmaceutical industries. Stabilized with Nb (Niobium) and resistant to intergranular corrosion. Weld metal is suitable for operating temperatures of up to 400°C, non-scaling up to 800°C, in air and oxidizing combustion gases.	 
EN ISO 14343 - A	W 19 9 Nb		
TS EN ISO 14343 - A	W 19 9 Nb		
DIN M. No.	1.4551		
TI 385			
AWS/ASME SFA - 5.9	ER385	Fully-austenitic stainless steel rod for GTA (TIG)-welding of unstabilized or stabilized corrosion resisting Cr-Ni-Mo alloyed stainless steels like 904L/1.4539. Especially used in flue gas desulphurization plants, fertilizer plants, sea water transfer fittings, petrochemical, paper and pulp industries, etc. Due to high Ni, Mo and low C content, weld metal have high resistant to intergranular, pitting, crevice and stress corrosion types in chloride containing solutions, phosphorus-, sulphur-, acetic-, formic acids, sea water.	 
EN ISO 14343 - A	W 20 25 5 Cu L		
TS EN ISO 14343 - A	W 20 25 5 Cu L		
DIN M. No.	~1.4539		
TI 410			
AWS/ASME SFA - 5.9	ER410	Martensitic stainless steel rod for GTA (TIG) welding of martensitic stainless steels, heat resistant steels and cast steels which contain approx. 13% chromium. Suitable for joining and surfacing of gas, water and steam fan, fan blades and fittings subjected corrosion, erosion and operating temperatures up to 450°C. Depending on type of base metal composition and thickness, preheating between 200 and 300°C, keeping the interpass temperature during welding and tempering between 700 and 750°C after welding are advisable.	 
EN ISO 14343 - A	W 13

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Stainless Steel TIG Welding Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
TI 630		GTA (TIG) welding rod for welding of 17Cr/4 Ni containing, 630 (1.4542) and similar precipitation hardening-martensitic stainless steels. Especially used in hydraulic equipment components, impellers, pump shafts, valves which are exposed to high corrosion in petrochemical industry, chemical plants. In order to gain precipitation hardening martensitic steel properties of the weld metal after welding, solution heat treatment shall be done at 1052°C (±28°C) to have austenite matrix, then quenching to 149-93°C to transform the matrix to martensite and then precipitation/aging heat treatment at 482-621°C for 4 hours. After precipitation hardening heat treatment, weld metal has very high mechanical strength and high toughness, as well as very good corrosion and oxidation resistance.	 
AWS/ASME SFA - 5.9	ER630		
EN ISO 14343 - B	SS630		
TS EN ISO 14343 - B	SS630		
DIN M. No.	1.4542		
TI 2209		Duplex (ferritic-austenitic) stainless steel welding rod for GTA (TIG) welding of duplex Cr-Ni-Mo stainless steels. Especially used in welding of acid tanks and pipes, in chemical, petrochemical, paper, shipbuilding and desalination industries. Suitable also for welding duplex stainless steels to carbon steels. The high-strength and ductile weld metal exhibits good resistance to pitting, crevice corrosion and stress corrosion cracking in chloride-bearing media. Suitable for operating temperatures of up to 250°C.	 
AWS/ASME SFA - 5.9	ER2209		
EN ISO 14343 - A	W 22 9 3 N L		
TS EN ISO 14343 - A	W 22 9 3 N L		
DIN M. No.	~1.4462		
TI 2594		Super duplex (ferritic-austenitic) stainless steel GTA (TIG) welding rod for welding Cr-Ni-Mo containing super duplex (ferritic-austenitic) stainless steels. Suitable for welding acid tanks and piping in chemical, petrochemical, paper, shipbuilding, sea water desalination industries and offshore platforms. It is also suitable for root pass welding of 22%Cr containing duplex stainless steels and joining of 13%Cr containing martensitic steels. Weld metal with high mechanical strength with high ductility and also generally has also high stress corrosion resistance, especially in chloride containing media. PREN:40 value provides high resistance to pitting corrosion.	 
AWS/ASME SFA - 5.9	ER2594

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Aluminium Alloy TIG Welding Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
TAL 1100		Pure aluminium GTA(TIG) welding of unalloyed aluminium base metals. It has got good colour matching with the aluminium base metals. High corrosion resistance and excellent electrical conductivity.	 
AWS/ASME SFA - 5.10	ER1070		
AWS/ASME SFA - 5.10	~ER1100		
EN ISO 18273	S AI 1070 (Al99.7)		
TS 6204 EN ISO 18273	S AI 1070 (Al99.7)		
DIN M. No.	3.0259		
TAL 4043		5% Silicon containing aluminium welding rod for GTA (TIG) welding of aluminium and aluminium alloys. Suitable for welding aluminium castings containing up to 7% silicon and Al-Mg-Si alloys which are containing up to 2 % Magnesium as alloying elements.	 
AWS/ASME SFA - 5.10	ER4043		
EN ISO 18273	S AI 4043 (AlSi5)		
TS EN ISO 18273	S AI 4043 (AlSi5)		
DIN M. No.	3.2245		
TAL 4047		Aluminium-Silicon alloy filler metal used both for brazing and GTA (TIG) welding of aluminium alloys. Suitable for welding Al-Si and Al-Si-Mg cast aluminium alloys, having silicon content of > 7%. Very good capillary flow in brazing and brazed joints are matching structure and colour of aluminium alloys. Suitable for brazing of rolled and cast aluminium alloys. Excess acetylene flame has to be used during brazing. Widely used in production of kettle, frier, solar heaters. Used in combination with BF14 flux in brazing applications.	 
AWS/ASME SFA - 5.10	ER4047

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Nickel Alloy TIG Welding Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
TNI 422 AWS/ASME SFA-5.14 EN ISO 18274-A TS EN ISO 18274-A DIN M. No.	ERNiCr-3 SNi 6082 SNi 6082 2.4806	Ni-Cr-Fe alloyed GTA (TIG) welding rod, depositing Ni-20Cr3Mn2,5Nb weld metal. Especially used for welding of highly creep resistant, heat and corrosion resistant Ni-Cr alloys, like Incoloy 800, 5-9% Ni containing steels, cryogenic stainless steels down to -196°C. Also suitable for joining dissimilar materials as stainless steels to low alloyed steels, stainless steels to nickel alloys, buffering of difficult to weld steels cladding on steels and repair welds of them. Weld metal deposit is insensitive to cracks, has very good resistance to acids, salts and alkaline solutions, molten salt (e.g. cyanide) in oxidizing and carburization atmospheres. In sulphurous atmospheres the weld metal can be used up to 500°C. Generally used for welding on LPG and LNG processing and storing plants, oven parts, burners, heat treatment equipment, cement works, moulds, transport and storage tanks of liquid gases in chemical, petrochemical industries, glassworks, civil engineering, repairing and maintenance workshops.	 
TNI 425 AWS/ASME SFA-5.14 EN ISO 18274-A TS EN ISO 18274-A DIN M. No.	ERNiCrMo-3 SNi 6625 (NiCr22Mo9Nb) SNi 6625 (NiCr22Mo9Nb) 2.4831	Ni-Cr-Mo alloyed GTA (TIG) welding rod, depositing Ni-22Cr9Mo3,5Nb weld metal. TNI 425 is used for welding of highly corrosion resistant Ni-Cr-Mo alloys, like Alloy 625, 825 and similar alloys. Due to its good cryogenic toughness down to -196°C, preferred for welding of cryogenic nickel alloys, e.g. X1NiCrMoCuN25-20-7. In sulphur free atmospheres the weld metal is non-scaling 1200°C, in sulphurous atmospheres the weld metal can be used in service temperatures up to 500°C. It is also highly resistant stress corrosion cracking and pitting corrosion in phosphoric acid, organic acids, sea water and polluting environments. Weld metal is insensitive to cracking and very resistant to thermal shocks. Used for joining of dissimilar nickel alloys, joining dissimilar stainless steels, low alloyed steels to stainless steels or to nickel alloys, buffering of difficult to weld steels and repair welding of them.	 

Copper Alloy TIG Welding Rods

Product Name and Standards	Applications and Properties	Polarity Welding Positions
TCU Al8 AWS/ASME SFA - 5.07 EN ISO 24373 TS EN ISO 24373 DIN M. No. ERCuAl-A1 S Cu 6100 (CuAl7) S Cu 6100 (CuAl7) 2.0921	Aluminium bronze welding rod for GTA (TIG) welding of aluminium bronzes, high strength brass and surfacing of steel, gray cast iron used in machine building and in the chemical industry, as well as in shipbuilding. Alloy showing resistance to corrosion and erosion to sea water, with a very good metal to metal sliding properties. Suitable for also welding joints on corrosion resistant aluminium bronze or high strength brass pipes. Joining copper tubing to steel. Surface build-up on ship propellers, skid rails, bearing surfaces, bearings, valves, slide gates, fittings.

GAS ARC TUNGSTEN (TIG) AND OXY-ACETYLENE WELDING RODS

Hardfacing TIG Rods

Product Name and Standards		Applications and Properties	Polarity Welding Positions
TH 801		Co-Cr-W alloy GTA (TIG) welding rod for hardfacing applications. Weld metal has got high resistance to metal-to-metal wear, corrosion and high temperatures from 500°C to 900°C. Resistant to low and medium level of mechanical and thermal shocks, due to its high hardness. Widely used for hardfacing of wire guides, rolling mill guides, extrusion dies and screws, valve seats, mechanical parts of steam turbines, cement screws, continuous casting dies and parts, pump tubing and shafts, mixes blades, wood saws.	 
AWS/ASME SFA - 5.21 EN 14700 TS EN 14700 DIN 8555	ERCoCr-C T Co3 T Co3 WSG 20-G0-55-CSTZ		
TH 806		Co-Cr-W alloy GTA (TIG) welding rod for hardfacing applications. Weld metal has got high resistance to metal-to-metal wear, corrosion and high temperatures from 500°C to 900°C. Due to weld metal toughness, it is resistant to mechanical and thermal shocks. Widely used for hardfacing of hot shearing blades, ingot tong ends, valves and valve seats, nozzles and glass dies.	 
AWS/ASME SFA - 5.21 EN 14700 TS EN 14700 DIN 8555	ERCoCr-A T Co2 T Co2 WSG 20-G0-40-CTZ		
TH 812		Co-Cr-W alloy TIG welding rod for hardfacing applications. Weld metal has got high resistance to metal-to-metal wear, corrosion and high temperatures from 500°C to 900°C. Due to weld metal toughness, it is resistant to mechanical and thermal shocks. Widely used for hardfacing of tools for cutting and machining of paper, cardboard, floor coverings, roofing and wood, extrusion screws, glass dies.	 
AWS/ASME SFA - 5.21 EN 14700 TS EN 14700 DIN 8555	ERCoCr-B T Co3 T Co3 WSG 20-G0-45-CTZ		
T CARBIDE 3000		Flexible rod for hardfacing by oxy-gas welding. Consist of a small diameter pure nickel core wire thickly coated tungsten carbides in a Ni-Cr-B-Si matrix. The weld metal is a heterogeneous metal composed of tungsten carbides (W ₂ C, WC) distributed in a hard and tough matrix. Shows extremely high abrasion resistance. It has got a quiet melting and good wetting. Especially used for hardfacing of mixers, crushing mills, die blades and heads, sand foundary equipment, drilling tricones.	   If required 1 Hour
EN 14700 TS EN 14700 DIN 8555	T Ni20 T Ni20 G21 UM-55-CG

GAS METAL ARC (MIG/MAG) WELDING WIRES

Unalloyed Steel MIG/MAG Welding Wires

Product Name and Standards	Applications and Properties	Polarity Welding Positions
MG 1 AWS/ASME SFA - 5.18 EN ISO 14341 - A EN ISO 14341 - A TS EN ISO 14341 - A TS EN ISO 14341 - A DIN M. No.	ER70S-3 G 38 3 C1 2Si G 38 3 M21 2Si G 38 3 C1 2Si G 38 3 M21 2Si 1.5125	Unalloyed wire electrode for GMA (MIG/MAG) welding of unalloyed steels by using CO ₂ or mixed gases, depending on thickness of the base metal. Characterized by a reduced slag formation and smooth welding deposit. Particularly suitable for welding of galvanized and pre-paint steels, welding unalloyed steels in pipe-lines, boilers and tank construction. Suitable also welding thin metal plates and repair welds. A thin and homogeneous copper coating increases electrical conductivity and protects the wire from using.
MG 2 AWS/ASME SFA - 5.18 EN ISO 14341 - A EN ISO 14341 - A TS EN ISO 14341 - A TS EN ISO 14341 - A DIN M. No.	ER70S-6 G 42 4 M21 3Si1 G 42 3 C1 3Si1 G 42 4 M21 3Si1 G 42 3 C1 3Si1 1.5125	Unalloyed wire electrode for GMA (MIG/MAG) welding of general structural steels, pipe steels, and cast steels using CO ₂ or mixed shielding gases, depending on thickness of the base metal. Generally used in steel construction, shipbuilding, machine, tank, boiler production, automotive industry. Preheating is required, depending on the plate thickness and carbon equivalent of the base metal. A thin and homogeneous copper coating increases electrical conductivity and protects the wire from rusting.
MG 3 AWS/ASME SFA - 5.18 EN ISO 14341 - A EN ISO 14341 - A TS EN ISO 14341 - A TS EN ISO 14341 - A DIN M. Suitable for welding of general structural steels, boiler steels, pipe steels and cast steels. Due to its special coating provides stable arc and no spatter especially with mixed shielding gases which can be used depending on the thickness. Generally preferred in robotic applications, due to its high welding performance without spatter and cleaning needs. Also provides cost advantages in cleaning after welding, torch spare part consumptions like, contact tip, spiral, driving wheel, anti-spatter spray. Due to these advantages preferably used in automotive, machine and steel furniture production.
MG 30 AWS/ASME SFA - 5.18 EN ISO 14341 - A EN ISO 14341 - A TS EN ISO 14341 - A TS EN ISO 14341 - A DIN M. GAS METAL ARC (MIG/MAG) WELDING WIRES

Unalloyed Steel MIG/MAG Welding Wires

Product Name and Standards	Applications and Properties	Polarity Welding Positions
MG 102 AWS/ASME SFA - 5.18 EN ISO 14341 - A TS EN ISO 14341 - A ER70S-2 G 42 3 M21 2Ti G 42 3 C1 2Ti G 42 3 M21 2Ti G 42 3 C1 2Ti	Micro-alloyed wire electrode for GMA (MIG/MAG) welding of unalloyed and low-alloy steels. Characterized by a reduced slag formation and smooth welding deposit. Due to its Al and Ti micro-alloy content, particularly suitable for single pass welding of galvanized, pre-painted, rusty and dirty steels, welding low alloy steels in pipe-lines, boilers and tank production. Suitable also welding in thin metal plates and repair welds. CO ₂ or mixed shielding gases can be used depending on the thickness of the base metal. A thin and homogeneous copper coating increases electrical conductivity and protects the wires from rusting.	 

Low-Alloyed, High Strength and Creep Resistant Steel MIG/MAG Welding Wires

Product Name and Standards	Applications and Properties	Polarity Welding Positions
MG 150 AWS/ASME SFA - 5.28 EN ISO 14341 - A TS EN ISO 14341 - A ER80S-Ni1 G 50 6 M21 3Ni1 G 50 6 M21 3Ni1	Low alloyed wire electrode for GMA (MIG/MAG) welding of steels, which are subjected to operating temperatures down to -60°C. Weld metal has high strength and high toughness. Suitable to use in petrochemical, chemical, oil/gas industries and off-shore platforms, especially welding of pipes, boilers, tanks and valves, pumps which are made of cast or forged steels.	 
MG 150W AWS/ASME SFA - 5.18 EN ISO 14341 - A TS EN ISO 14341 - A ER80S-G G 42 2 M21 Z2NiCu G 42 2 M21 Z2NiCu	Low-alloyed GMA (MIG/MAG) welding wire designed for welding of weathering steels (like COR-TEN) with high mechanical properties. Due to nickel and copper alloys, it provides higher corrosion resistance than carbon steels. Suitable for welding in steel construction manufacturing such as bridge, stadium and steel construction.	 
MG 182 AWS/ASME SFA - 5.28 EN ISO 16834 - A TS EN ISO 16834 - A ER110S-G G 69 6 M21 Mn4Ni1,5CrMo G 69 6 M21 Mn4Ni1,5CrMo	Low alloyed wire electrode for GMA (MIG/MAG) welding of fine grained and high strength steels with yield strength of up to 690 N/mm ² . Weld metal exhibits good toughness properties down to -60°C. Especially used in high strength pipe-lines, earthmoving and mining equipments, trucks, mobile cranes, concrete pumps cranes and lift productions.

GAS METAL ARC (MIG/MAG) WELDING WIRES

Low-Alloyed, High Strength and Creep Resistant Steel MIG/MAG Welding Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
MG 183		Low alloyed wire electrode for GMA (MIG/MAG) welding of fine grained and high strength steels with yield strength of up to 690 N/mm ² . Weld metal exhibits good toughness properties down to -40°C. Especially used in high strength pipe-lines, earthmoving and mining equipments, trucks, mobile cranes, concrete pumps cranes and lift productions.	 
AWS/ASME SFA - 5.28	ER110S-G		
AWS/ASME SFA - 5.28	ER100S-G		
EN ISO 16834 - A	G 69 4 M21 Mn3Ni1CrMo		
TS EN ISO 16834 - A	G 69 4 M21 Mn3Ni1CrMo		
MG 192		Low alloyed wire electrode for GMA (MIG/MAG) welding of fine grained and high strength steels with yield strength of up to 960 N/mm ² . Weld metal exhibits good toughness properties down to -60°C. Especially used in earthmoving, mining equipments, trucks, mobile cranes, concrete pumps crane, lift and oilfield equipments productions.	 
AWS/ASME SFA - 5.28	ER120S-G		
EN ISO 16834 - A	G 89 6 M21 Mn4Ni2CrMo		
TS EN ISO 16834 - A	G 89 6 M21 Mn4Ni2CrMo		
MG 201		Low alloyed wire electrode for GMA (MIG/MAG) welding of creep resistant boiler and pipe steels subjected to operating temperatures up to 500°C. Also suitable for joining C-Mn steels, which will be postweld heat treated. CO ₂ or mixed shielding gases can be used depending on the thickness of the base metal. A thin and homogeneous copper coating increases electrical conductivity and protects the wire from rusting.	 
AWS/ASME SFA - 5.28	ER70S-A1		
AWS/ASME SFA - 5.28	ER80S-G		
EN ISO 21952 - A	G MoSi		
TS EN ISO 21952 - A	G MoSi		
DIN M. No.	1.5424		
MG 201A		Low alloyed wire electrode for GMA (MIG/MAG) welding of creep resistant boiler and pipe steels subjected to operating temperatures up to 530°C. Contains high level of deoxidizing (Mn and Si) elements to control porosity during welding. Welds are of X-ray quality. Also suitable for joining C-Mn steels to be postweld heat treated. Observe directions as to pre and post weld heat treatment of base material. CO ₂ or mixed shielding gases can be used depending on the thickness of the base metal. A thin and homogeneous copper coating increases electrical conductivity and protects the wire from rusting.	 
AWS/ASME SFA - 5.28	ER80S-D2		
EN ISO 21952 - A	G Z MnMo		
TS EN ISO 21952 - A	G Z MnMo		
MG 211		Low-alloy wire electrode for GMA (MIG/MAG) welding of Cr-Mo alloyed creep resistant boiler and pipe steels subjected to operating temperatures up to 570°C. Also suitable for joining C-Mn steels to be postweld heat treated. Observe directions as to pre and post weld heat treatment of base material. CO ₂ or mixed shielding gases can be used depending on the thickness of the base metal. A thin and homogeneous copper coating increases electrical conductivity and protects the wire from rusting.

GAS METAL ARC (MIG/MAG) WELDING WIRES

Stainless Steel MIG Welding Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
MI 309LSi		Austenitic-ferritic wire electrode for GMA (MIG/MAG) welding of dissimilar joints of stainless steels to unalloyed or low-alloyed steels, subjected to operating temperatures up to 300°C. Suitable to use also as buffer layer on carbon steel before welding with 308 and 308L to reach 304 and 304L layer. Low carbon content increases resistance to intergranular corrosion.	 
AWS/ASME SFA - 5.9	ER309LSi		
EN ISO 14343 - A	G 23 12 LSi		
TS EN ISO 14343 - A	G 23 12 LSi		
DIN M. No.	1.4332		
MI 310		Fully austenitic stainless steel wire electrode for GMA (MIG/MAG) welding of heat resistant steels, containing approx. 25% chromium and 20% nickel, which are used in heat treatment and industrial furnaces and equipments, like cement and steel industries. Also suited for welding heat resistant and scaling resistant ferritic chromium steels, provided that corrosion attack by reducing sulphur-bearing combustion gases is not be expected. Weld metal exhibits good toughness down to -196°C and non-scaling up to 1200°C.	 
AWS/ASME SFA - 5.9	ER310		
EN ISO 14343 - A	G 25 20		
TS EN ISO 14343 - A	G 25 20		
DIN M. No.	1.4842		
MI 312		Austenitic-ferritic stainless steel wire electrode for GMA (MIG/MAG) welding of dissimilar steels and depositing buffer layers on ferritic steels. It features high resistance to cracking and toughness, is therefore suited for joining difficult to weld steels and depositing stress-relaxing buffer layers on crack sensitive base metals. Weld metal is non-scaling up to 1100°C. Especially used in die and tool repair, crack repairs in difficult to weld steels, gear teeth repair and rebuilding, buffer layer application on cutting blades. Suitable also for welding galvanized steel plates.	 
AWS/ASME SFA - 5.9	ER312		
EN ISO 14343 - A	G 29 9		
TS EN ISO 14343 - A	G 29 9		
DIN M. No.	1.4337		
MI 316LSi		Austenitic stainless steel wire electrode for GMA (MIG) welding of unstabilized or stabilized corrosion resisting Cr-Ni-Mo steels. Resistant to intergranular corrosion up to 400°C. Especially used in welding chemical tanks, pipes and equipments which are used in chemical, petrochemical, paint, textile, paper and shipbuilding industries, etc.	 
AWS/ASME SFA - 5.9	ER316LSi		
EN ISO 14343 - A	G 19 12 3 LSi		
TS EN ISO 14343 - A	G 19 12 3 LSi		
DIN M. No.	1.4430		
MI 347		Stabilized austenitic stainless steel wire electrode for GMA (MIG/MAG) welding of unstabilized and stabilized corrosion resistant Cr-Ni steels, used in food, beverage, chemical and pharmaceutical industries. Stabilized with Nb (Niobium) and resistant to intergranular corrosion. Weld metal is suitable for operating temperatures of up to 400°C, non-scaling up to 800°C, in air and oxidizing combustion gases.	 
AWS/ASME SFA - 5.9	ER347		
EN ISO 14343 - A	G 19 9 Nb		
TS EN ISO 14343 - A	G 19 9 Nb

GAS METAL ARC (MIG/MAG) WELDING WIRES

Stainless Steel MIG Welding Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
MI 385 AWS/ASME SFA - 5.9 EN ISO 14343 - A TS EN ISO 14343 - A DIN M. No.		Fully-austenitic stainless steel wire electrode for GMA (MIG/MAG) welding of unstabilized or stabilized corrosion resisting Cr-Ni-Mo alloyed stainless steels like 904L/1.4539. Especially used in flue gas desulphurization plants, fertilizer plants, sea water transfer fittings, petrochemical, paper and pulp industries, etc. Due to high Ni, Mo and low C content, weld metal has high resistant to intergranular, pitting, crevice and stress corrosion types in chloride containing solutions, phosphorus-, sulphur-, acetic-, formic acids, sea water.	 
MI 410 AWS/ASME SFA - 5.9 EN ISO 14343 - A TS EN ISO 14343 - A DIN M. No.		Martensitic stainless steel wire for GMA (MIG/MAG) welding of martensitic stainless steels, heat resistant steels and cast steels which contain approx. 13% chromium. Suitable for joining and surfacing of gas, water and steam fan, fan blades and fittings subjected to corrosion, erosion and operating temperatures up to 450°C. Depending on type of base metal composition and thickness, preheating between 200 and 300°C, keeping the interpass temperature during welding and tempering between 700 and 750°C after welding are advisable.	 
MI 2209 AWS/ASME SFA - 5.9 EN ISO 14343 - A TS EN ISO 14343 - A DIN M. No.		Duplex (ferritic-austenitic) stainless steel wire electrode for GMA (MIG/MAG) welding of duplex Cr-Ni-Mo stainless steels. Especially used in welding of acid tanks and pipes, in chemical, petrochemical, paper, shipbuilding and desalination industries. Suitable also for welding duplex stainless steels to carbon steels. The high strength and ductile weld metal exhibits good resistance to pitting, crevice corrosion and stress corrosion cracking in chloride-bearing media. Suitable for operating temperatures up to 250°C.

MAL 5556 AWS/ASME SFA - 5.10 EN ISO 18273 TS EN ISO 18273 DIN M. No. ER5556 S Al 5556 (AlMg5Mn1Ti(A)) S Al 5556 (AlMg5Mn1Ti(A)) ~3.3548	5% Magnesium containing aluminium welding wire for GMA (MIG) welding of Al-Mg alloys and Al-Mg-Zn alloys. Have a good corrosion resistance especially in sea water and gives excellent ductility.	 

Nickel Alloy MIG Welding Wires

Product Name and Standards	Applications and Properties	Polarity Welding Positions
MNI 425 AWS/ASME SFA-5.14 EN ISO 18274-A TS EN ISO 18274-A DIN M. No. ERNiCrMo-3 S Ni 6625 (NiCr22Mo9Nb) S Ni 6625 (NiCr22Mo9Nb) 2.4831	Ni-Cr-Mo alloyed GMA (MIG) welding wire, depositing Ni-22Cr9Mo3,5Nb weld metal. Used for welding of highly corrosion resistant Ni-Cr-Mo alloys, like Alloy 625, 825 and similar alloys. Due to its good cryogenic toughness down to -196°C, preferred for welding of cryogenic nickel alloys, e.g. X1NiCrMoCuN25-20-7. In sulphur free atmospheres the weld metal is non-scaling up to 1200°C, in sulphurous atmospheres the weld metal can be used in service temperatures up to 500°C. It is also highly resistant stress corrosion cracking and pitting corrosion in phosphoric acid, organic acids, sea water and polluting environments. Weld metal is insensitive to cracking and very resistant to thermal shocks. Used for joining of dissimilar nickel alloys, joining dissimilar stainless steels, low alloyed steels to stainless steels or to nickel alloys, buffering of difficult to weld steels and repair welding of them.	 

Hardfacing MIG/MAG Welding Wires

Product Name and Standards	Applications and Properties	Polarity Welding Positions
MH 361 EN 14700 TS EN 14700 DIN 8555 DIN M. No. S Fe8 S Fe8 MSG 6-GZ-60-GPS 1.4718	Gas metal arc (MIG/MAG) welding wire especially developed for hardfacing of parts subjected to high metal-to-metal friction, mineral abrasion and moderate impact. Weld metal can retain its hardness at high temperatures, till 600°C. Weld metal can be grinded and machined by diamond tools. A tough buffer layer with FCW 30 is recommended before hardfacing, if base metal has high carbon and low weldability. Heat treatment after hardfacing will decrease as-welded hardness. Typical Applications: Ceramic tile moulds, mixer blades, crushers, earth moving equipments, hot cut-offs, shear blades, dies for pressure casting, scraper blades, conveyors, rollers.

GAS METAL ARC (MIG/MAG) WELDING WIRES

Copper Alloy MIG Welding Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
MCU Sn AWS/ASME SFA - 5.7 EN ISO 24373 TS EN ISO 24373 DIN M. No.		ERCu S Cu 1898 (CuSn1) S Cu 1898 (CuSn1) 2.1006	Tin alloyed copper wire electrode for GMA (MIG) welding of copper and low alloyed copper alloys. Particularly used in electric and heat conductor parts, which are made of pure copper. Suitable for welding oxygen-free copper and copper materials subject to high strain. Gives pore-free and easily machinable welding seams.
MCU Sn6 AWS/ASME SFA - 5.7 EN ISO 24373 TS EN ISO 24373 DIN M. No.		~ERCuSn-A S Cu 5180A (CuSn6P) S Cu 5180A (CuSn6P) 2.1022	6% Tin alloyed copper wire electrode for GMA (MIG) welding and surfacing of Cu-Sn (4 - 8 % Sn bronze), Cu-Zn (brass), and Cu-Sn-Zn-Pb alloys. Suitable for joining of copper alloys to steels, repair welding of cast bronzes and cladding on cast iron and steels. For large workpieces e.g. thicknesses exceeding 5 mm, a preheat at about 250°C is recommended.
MCU Al8 AWS/ASME SFA - 5.7 EN ISO 24373 TS EN ISO 24373 DIN M. No.		ERCuAl-A1 S Cu 6100 (CuAl7) S Cu 6100 (CuAl7) 2.0921	8% Aluminium alloyed copper wire electrode for GMA (MIG) welding of copper-aluminium (Cu-Al) alloys (aluminium-bronzes). Also suitable for surfacing of parts subjected to metal to metal wear under high compressive stresses or in the presence of corrosive agents (acids, sea water).
MCU Si3 AWS/ASME SFA - 5.10 EN ISO 24373 TS EN ISO 24373 DIN M. No.		ERCuSi-A S Cu 6560 (CuSi3Mn1) S Cu 6560 (CuSi3Mn1) 2.1461	3% Silicon alloyed copper wire electrode for GMA (MIG) welding of copper(Cu), Cu-Si (silicon bronze), Cu-Zn (brass) and as well as surfacing of unalloyed or medium alloyed steels or cast irons. Due to less Zn burn and corrosion resistant weld metal, suitable for joining of galvanized steels. Resulted Zn burn is less and weld metal is corrosion resistant in galvanized steels. For large workpieces e.g. thicknesses exceeding 5 mm, a preheat at about 250°C is recommended.

FLUX CORED ARC WELDING WIRES

Unalloyed Steel Flux Cored Welding Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCW 11		Rutile type flux cored wire with fast-freezing slag. Especially designed for welding with CO ₂ (carbondioxide) gas, in shipbuilding and steel construction. Owing to its easily controllable weld pool, electrode is well suited for positional welding with higher currents, resulting in increased deposition rates. Particularly suited for welding in the horizontal-vertical position, e.g. in tank welding. Electrode of 1.20 mm in diameter is also suitable for vertical-down welding. Low spatter loss, easy slag removal, finely ripped pore-free welds blending into base metal without undercut.	
AWS/ASME SFA - 5.20	E71T-1C		
EN ISO 17632-A	T46 2 P C 1		
TS EN ISO 17632-A	T46 2 P C 1		
FCW 11A		Rutile type flux cored wire with fast-freezing slag. Especially designed for welding with CO ₂ (carbondioxide) gas, in shipbuilding and steel construction. Owing to its easily controllable weld pool, electrode is well suited for positional welding with higher currents, resulting in increased deposition rates. Its special vacuum packing provides low diffusible hydrogen level in weld metal, in the case of proper handling and storage conditions. Electrode of 1.20 mm in diameter is also suitable for vertical-down welding. Low spatter loss, easy slag removal in the fillet and narrow grooves, finely ripped pore-free welds blending into base metal without undercut.	
AWS/ASME SFA - 5.20	E71T-1C H4		
EN ISO 17632-A	T46 2 P C 1 H5		
TS EN ISO 17632-A	T46 2 P C 1 H5		
FCW 12		Rutile type flux cored wire, especially designed for welding in steel construction, piping, machine fabrication and shipbuilding by using mix shielding gas. Owing to its easily controllable weld pool and fast freezing slag particularly suited for welding in all position. Good gap-bridging property, low spatter loss, easy slag removal even in narrow grooves. Finely ripped pore-free welds blending into base metal without undercut.	
AWS/ASME SFA - 5.20	E71T1-M		
EN ISO 17632-A	T46 2 P M 1		
TS EN ISO 17632-A	T46 2 P M 1		
FCW 13		Rutile type flux cored wire, designed for welding in steel construction, piping, machine fabrication and shipbuilding by using M21-mix gas and CO ₂ shielding gas. Owing to its easily controllable weld pool and fast freezing slag particularly suited for welding in all position. Welding in all-position is easy with a wide parameter range, especially when using mixed gas. Good gap-bridging property, low spatter loss, easy slag removal even in narrow grooves. Finely ripped pore-free welds blending into base metal without undercut.	
AWS/ASME SFA 5.20	E71T-1M		
AWS/ASME SFA 5.20	E71T-1C

TS EN ISO 17632 - A	T46 3 P M 1 H5		
FCW 14		Rutile type flux cored wire with very fast-freezing slag. Especially designed for welding with CO ₂ (carbondioxide) gas, in shipbuilding and steel construction. Suitable to use in lower currents and there is no spatter in 20-24V. Owing to its very easily controllable weld pool, electrode is well suited for positional welding with higher currents, resulting in increased deposition rates. Particularly suited for welding in the horizontal-vertical position, e.g. in tank welding. Electrode of 1.20 mm in diameter is also suitable for vertical-down welding. Low spatter loss, easy slag removal, finely ripped pore-free welds blending into base metal without undercut.

FLUX CORED ARC WELDING WIRES

Unalloyed Steel Flux Cored Welding Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCW 16		Rutile type flux cored wire, which has high strength and designed for welding in all position. Suitable for welding fine grained structural steels and high strength shipbuilding steels in all position, where low heat input and less deformation are required. Has a stable and quite arc. Good gap-bridging property, low spatter loss, easy slag removal even in narrow grooves. Finely ripped pore-free welds blending into base metal without undercut.	 
AWS/ASME SFA - 5.20	E71T-1C J		
AWS/ASME SFA - 5.20	E71T-9C J		
EN ISO 17632-A	T46 4 P C 1		
TS EN ISO 17632-A	T46 4 P C 1		
FCW 17		Rutile type flux cored wire, designed for welding applications which required good toughness values down to -40°C service temperatures, in steel construction, piping, machine fabrication, shipbuilding and especially offshore structures. Used with M21 mix shielding gas. Owing to its easily controllable weld pool and fast freezing slag particularly suited for welding in all position. Good gap-bridging property in thick sections, has low spatter loss, finely ripped pore-free welds blending into base metal without undercut. Easy slag removal even in fillet and narrow grooves.	 
AWS/ASME SFA - 5.20	E71T-1MJ		
AWS/ASME SFA - 5.20	E71T-9MJ		
AWS/ASME SFA - 5.20	E71T-12MJ		
EN ISO 17632-A	T46 4 P M 1 H5		
TS EN ISO 17632-A	T46 4 P M 1 H5		
FCW 21		Slagless metal powder cored electrode with outstanding welding properties in the short-arc and spray arc range. Almost spatter-free when welding in the spray-arc range with mixed gas. Good restriking, even with cold wire tip, thus being suitable for robot application. Characteristic features high deposition rate and welding speed, good side wall fusion, finely rippled welds, without undercutting into the base metal, not even on contaminated or corroded metal surfaces. Weldmetal has a little formation of silicates on surface, so that multi-pass welds can be made without cleaning. FCW 21 is well-suited for root-and positional welding and gap bridging, due to it's easily controllable weld pool in the short-arc range.	 
AWS/ASME SFA - 5.18	E70C-6M H4		
EN ISO 17632-A	T46 4 M M 2 H5		
TS EN ISO 17632-A	T46 4 M M 2 H5		
FCW 30		Basic type flux cored wire for welding thick steel sections and dynamically loaded structures, where high toughness is required. Provides high mechanical properties and high crack resistant weld metal. Suitable to welding of boiler, tank, pressure vessel, heavy machine production and heavy constructions. Weld are metallurgically clean and are of X-ray quality. Suitable for welding high carbon steels and buffer application on worn parts before hardfacing.	 
AWS/ASME SFA-5.20	E70T-5M H4		
AWS/ASME SFA-5.20	E70T-5C H4

TS EN ISO 17632-A	T42 4 B C 3 H5		
FCO 90		Self-shielded (open-arc) flux cored wire, suitable for welding in all position. Used in outdoor welding of construction, iron-works, roof assembly jobs, repair welds in agricultural equipment and vehicles. Suitable for single pass welding in lap and butt joints of thin plates. Has a stable arc, easily controllable weld pool and easy slag removal.	 
AWS/ASME SFA - 5.20	E71T-GS

FLUX CORED ARC WELDING WIRES

Low Alloyed, High Strength and Creep Resistant Steel Flux Cored Welding Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCW 140		Rutile type flux cored wire, designed for welding fine grained structural steels. Successfully used in single and multi-run welding of especially in steel construction, bridge, offshore platform, shipbuilding and pipe laying. Owing to it's easily controllable weld pool and fast freezing slag suited for welding in all position easily. It's metal recovery provides ability of good gap bridging and filling property. Due to it's nickel content, weld metal has high yield and tensile strengths, therefore suitable to use weld fine grained structural steels at operating temperatures down to -40°C. Diffusible hydrogen content is 5 ml per 100 g deposited weld metal, so highly resistant to cold cracking. Has a stable and quite arc with low spatter loss. Has easily removable slag, generally self removed.	
AWS/ASME SFA - 5.29	E81T1-Ni1C		
EN ISO 17632-A	T46 4 1Ni P C 1		
TS EN ISO 17632-A	T46 4 1Ni P C 1		
FCW 142		Rutile type flux cored wire, designed for welding fine grained structural steels by using M21 mix shielding gas. Successfully used in single and multi-run welding in steel construction, bridge, offshore platform, shipbuilding and pipe laying. Owing to it's easily controllable weld pool and fast freezing slag, suited for welding in all position easily. It's metal recovery provides ability of good gap bridging and filling property. Because of nickel alloy, weld metal yield and tensile strength is high and weld metal is proper to use on fine grained steels at operating temperatures 450°C down to -40°C. Diffusible hydrogen content is 5 ml per 100 g deposited weld metal, so highly resistant to cold cracking. Has a stable and quite arc with low spatter loss. Has easily removable slag and generally self removed.	
AWS/ASME SFA - 5.29	E81T1-Ni1M		
EN ISO 17632 - A	T46 4 1Ni P M 1 H5		
TS EN ISO 17632 - A	T46 4 1Ni P M 1 H5		
FCW 150W		Rutile type flux cored wire, which is especially designed for welding weathering steels (like COR-TEN steels), high strength and fine grained structural steels. Suitable for welding in steel construction in single and multi-run welding in all position. Owing to it's easily controllable weld pool and fast freezing slag particularly suited for welding in all position. Has a stable and quite arc with low spatter loss.	
AWS/ASME SFA-5.29	E81T1-W2C		
EN ISO 17632-B	T553T1-1C A-NCC1		
TS EN ISO 17632-B	T553T1-1C A-NCC1		
FCW 171		Rutile type flux cored wire, designed for welding fine grained structural steels by using CO2 shielding gas. Successfully used in single and multi-pass welding in steel construction, offshore platform, shipbuilding and pipe laying. Provides weld metal with high toughness, down to -60°C. Diffusible hydrogen content is 5 ml per 100 g deposited weld metal, so highly resistant to cold cracking. Has a stable and quite arc with low spatter loss. Has easily removable slag and generally self removing.	
AWS/ASME SFA-5.29	E81T-1 Ni2 C J		
EN ISO 17632 - A	T50 6 2Ni P C 2 H5		
TS EN ISO 17632 - A	T50 6 2Ni P C 2 H5		
FCW 172		Rutile type flux cored wire, designed for welding fine grained structural steels by using M21 - mix shielding gas. Successfully used in single and multi-pass welding in steel construction, offshore platform, shipbuilding and pipe laying which need high strength and toughness at low temperatures. Provides weld metal with high toughness, down to -60°C. Diffusible hydrogen content is 5 ml per 100 g deposited weld metal, so highly resistant to cold cracking. Has a stable and quite arc without spatter. Has easily removable slag and generally self removing.

Low Alloyed, High Strength and Creep Resistant Steel Flux Cored Welding Wires

Product Name and Standards	Applications and Properties	Polarity Welding Positions
FCW 201 AWS/ASME SFA - 5.29 E81T1-A1C EN ISO 17634-A T MoL P C 1 H5 TS EN ISO 17634-A T MoL P C 1 H5	Flux cored wire designed for welding boiler, pipe steels, steam generators and other equipments, subjected to operating temperatures up to 500°C. Suitable to use in all position welding and preferred to use where high mechanical properties and X-ray quality are required.	 

Hardfacing Flux Cored Wires

Product Name and Standards	Applications and Properties	Polarity Welding Positions
FCO 250 EN 14700 T Fe9 TS EN 14700 T Fe9 DIN 8555 MF 7-GF-200-KPR	Open-arc flux cored wire for the rebuilding and reclamation of heavy parts, made of carbon steels or 14% Mn steels. Due to its high crack resistance, it is successfully used for buffer layer application prior to hardfacing on crack sensitive parts. Weld metal is very resistant to pressure and impact. Machinable with carbide tipped tools. Typical Applications: Rebuilding and reclamation of railway rails and crossovers, mill shaft drive end, buffer layer on gyratory crusher mantles, re-pointing of shovel teeth, buffer layer on crawler tractor link prior to overlaying with more abrasion resistance and crack sensitive materials, rebuilding of rollers made of low alloy steels.	 
FCH 325 EN 14700 T Fe1 TS EN 14700 T Fe1 DIN 8555 MF 1-GF-M21-250-P DIN 8555 MF 1-GF-C1-250-P	Gas shielded flux cored wire, which is developed for hardfacing of parts, subjected to metal-to-metal friction wear (adhesion) and impact. The weld metal has medium hardness and machinable by chip forming, hardening is possible by flame or by induction hardening. Due to high toughness and high crack resistance, it is also suitable for buffer layer applications. Interpass temperature should not exceed 250°C, during welding. Typical Applications: Suitable for hardfacing rollers, railway rails and crossings, rolling mills, caterpillar track rolls and pads, gears, sprockets, shafts, crane rollers and mine car wheels.	 
FCO 330 EN 14700 T Fe1 TS EN 14700 T Fe1 DIN 8555 MF 1-GF-300-P	Open-arc flux cored wire which is developed for hardfacing of parts subjected to metal-to-metal friction wear (adhesion) and medium degree impacts. Due to its very tough and crack resistant weld metal, it is also used for buffer layer applications. As the weld metal has medium degree of hardness it can be machined by chip forming and flame or inductive hardening is possible. Interpass temperature should not exceed 250°C, during welding. Typical Applications: Hardfacing torque gears, gear wheels, shafts, pallet reels, crane wheels, pulleys, railway rails, crossings and switch points, rollers, caterpillar tracks, sprockets, track links, gears, shafts, pinion gears in sugar industry, screws in oil industry, crane drums and wheels, mine car wheels and sheaves.

FLUX CORED ARC WELDING WIRES

Hardfacing Flux Cored Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCH 330 EN 14700 TS EN 14700 DIN 8555		Gas shielded flux cored wire which is developed for hardfacing of parts subjected to metal-to-metal friction wear (adhesion) and medium degree impacts. Due to its very tough and crack resistant weld metal, it is also used for buffer layer applications. As the weld metal has medium degree of hardness it can be machined by chip forming and flame or inductive hardening is possible. Interpass temperature should not exceed 250°C, during welding. Typical Applications: Hardfacing torque gears, gear wheels, shafts, pallet reels, crane wheels, pulleys, railway rails, crossings and switch points, rollers, caterpillar tracks, sprockets, track links, gears, shafts, pinion gears in sugar industry, screws in oil industry, crane drums and wheels, mine car wheels and sheaves.	
FCH 335 EN 14700 TS EN 14700 DIN 8555		Gas shielded flux cored wire, which is developed for hardfacing of parts, subjected to metal-to-metal friction wear (adhesion) and medium degree impacts. The weld metal is tough and free of cracks and therefore resistant to shocks and impacts. Weld metal is easily machinable by chip forming. Interpass temperature should not exceed 250°C, during welding. Typical Applications: Suitable for hardfacing rollers, railway rails and crossings, rolling mills, caterpillar track rolls and pads, gears, sprockets, shafts, crane rollers and mine car wheels.	
FCH 340 EN 14700 TS EN 14700 DIN 8555		Gas shielded flux cored wire, which is developed for hardfacing of parts, subjected to metal-to-metal friction wear (adhesion) and medium to high degree impacts. Weld metal can be machinable by chip forming by means of carbide tipped tools. Interpass temperature should not exceed 250°C, during welding. Typical Applications: Suitable for hardfacing rollers, idlers, gears, sprockets, shafts, crane rollers and mine car wheels.	
FCH 355 EN 14700 TS EN 14700 DIN 8555		Gas shielded, high alloyed, flux cored wire designed for hardfacing deposit with high hardness. Particularly suited for wearing parts subjected to metal to metal wear (adhesion) and high impact. Weld metal is tough, free of cracks and therefore resistant to shock and impacts. Weld metal deposit is only machinable by grinding or carbide tipped tools. If the base metal has high carbon and low weldability, a tough buffer layer with FCW 30 is recommended before hardfacing. Heat treatment after hardfacing will decrease as-welded hardness. Typical Applications: Hardfacing of feeding screws, conveyors and machine parts in brick and mining industries.	
FCO 356 EN 14700 TS EN 14700 DIN 8555		Open-arc flux cored wire, which is developed for hardfacing of parts subjected of impact high compressive stresses and metal-to-metal wear. Provides martensitic weld metal with high hardness. Weld metal can be machined by grinding or by diamond cutting bits. It is recommended to apply a buffer layer with FCW 30 on base metals with high carbon and low weldability, before hardfacing. The deposit is heat treatable and forgeable. Typical Applications: Suitable for hardfacing of rope and cable sheaves, bed knives, steel mill rollers, crane wheels, forging dies.

FLUX CORED ARC WELDING WIRES

Hardfacing Flux Cored Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCH 356	EN 14700	Gas shielded hardfacing flux cored wire, which is developed for hardfacing of parts, subjected to impact, high compressive stresses and metal-to-metal wear. Provides martensitic weld metal with high hardness. Weld metal can be machined by grinding or by diamond cutting bits. It is recommended to apply a buffer layer with FCW 30 on base metals with high carbon and low weldability, before hardfacing. The deposit is heat treatable and forgeable.	
	TS EN 14700 DIN 8555		
	T Z Fe8 T Z Fe8 MF 6-GF-55-PT		
		Typical Applications: Suitable for hardfacing of rope and cable sheaves, bed knives, steel mill rollers, crane wheels, forging dies.	
FCH 360	EN 14700	Gas shielded, high alloyed, flux cored wire designed for hardfacing deposit with high hardness. Especially developed for hardfacing of parts subjected to high metal-to-metal wear and moderate impact. Weld metal can retain its hardness at high temperatures, till 600°C. Weld metal can be grinded and machined by diamond tools. Weld metal is resistant to cracking and shall not be welded more then 3 pass. A tough buffer layer with FCW 30 is recommended before hardfacing, if base metal has high carbon and low weldability. Heat treatment after hardfacing will decrease as-welded hardness.	
	TS EN 14700 DIN 8555		
	T Fe8 T Fe8 MF 6-GF-60-GPT		
		Typical Applications: Hardfacing hot cut offs, shear blades, dies for pressure casting, scraper blades, conveyors, rollers, crusher rolls and worn parts in agricultural equipments.	
FCH 361	EN 14700	Gas shielded, hardfacing flux cored wire especially developed for hardfacing of parts subjected to high metal-to-metal friction, mineral abrasion and moderate impact. Weld metal can retain it's hardness at high temperatures, till 600°C. Weld metal can be grinded and machined by diamond tools. A tough buffer layer with FCW 30 is recommended before hardfacing, if base metal has high carbon and low weldability. Heat treatment after hardfacing will decrease as-welded hardness.	
	TS EN 14700 DIN 8555		
	T Fe8 T Fe8 MF 6-GF-60-GP		
		Typical Applications: Hardfacing of ceramic moulds, mixer blades, crushers, earth moving equipments, hot cut-offs, shear blades, dies for pressure casting, scraper blades, conveyors, rollers.	
FCO 370	EN 14700	Open-arc hardfacing flux cored wire which is resistant to heavy impact, gouging and grinding abrasion together with resistant to cracking. Weld metal deposit composed of a hard martensitic matrix and finely dispersed titanium carbides. Weld metal is machinable by grinding. Maximum deposit thickness depends upon application and procedure used.	
	TS EN 14700 DIN 8555		
	T Fe6 T Fe6 MF 6-GF-60-GP		
		Typical Applications: Hardfacing of crusher cylinders, crusher hammers and mantels, agricultural tools, asphalt mixer blades, shovel bucket teeth and lips, bulldozer blades, cane knives and shredders, gyratory crusher mantles, bed knives and anvil in the wood pulp industry.	
FCH 371	EN 14700	Gas shielded flux cored wire for hardfacing of parts subjected to high metal to metal wear, abrasion and impact. Weld metal can retain it's hardness at high temperatures. The weld metal is resistant to cracking and highly resistant to impact and abrasion. In the case of thick overlays, it is recommended to use FCW 30 for build-up and buffer layers. The weld deposit contains hard phases in the form carbides. Machining is only possible by grinding or hot chip forming.	
	TS EN 14700 DIN 8555		
	T Z Fe8 T Z Fe8 MF 6-GF-60-GP		
		Typical Applications: Hardfacing of roll type crushers, worm conveyors, scraper blades, dipper teeth etc.

FLUX CORED ARC WELDING WIRES

Hardfacing Flux Cored Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCH 373	EN 14700	Gas shielded flux cored wire for hardfacing of parts, subjected to high metal to metal wear, abrasion and impact. Weld metal can retain it's hardness under high temperatures. The weld metal is resistant to cracking and also highly resistant to impact and abrasion. When thick hardfacing is necessary, it is recommended to use FCW 30 for build-up layers. The weld deposit contains hard carbides. Machining is possible only by grinding or hot chip forming.	 
	TS EN 14700 DIN 8555		
	T Z Fe8 T Z Fe8 MF 6-GF-60-GP		
		Typical Applications: Hardfacing of roll type crushers, worm conveyors, scraper blades, dipper teeth etc.	
FCO 415	EN 14700	Open-arc flux cored wire for hardfacing of parts, subjected to metal to metal wear (adhesion), moderate impact, high thermal fatigue and corrosion at high temperatures. Especially designed for hardfacing and renovation of continuous casting rollers. Ferritic-martensitic weld metal contains Cr, Ni, Mo, V and Nb alloys. Has a very silent arc and provides smooth and easily machinable surface with no spatter. Thin slag is formed on the bead. Provides smooth and machinable surface.	 
	TS EN 14700 DIN 8555		
	T Fe7 T Fe7 MF 5-GF-45-C		
		Typical Applications: Hardfacing of continuous casting rollers and similar rollers operating at high service temperatures.	
FCH 415	EN 14700	Gas shielded flux cored wire for hardfacing of parts, subjected to metal-to-metal wear (adhesion), moderate impact, creep, thermal fatigue and corrosion at high temperatures. Especially designed for hardfacing and renovation of continuous casting rollers. Ferritic-martensitic weld metal contains Cr, Ni, Mo, V and Nb alloys. Has a very silent arc and provides smooth and easily machinable surface with no spatter.	 
	TS EN 14700 DIN 8555		
	T Fe7 T Fe7 MF 5-GF-45-C		
		Typical applications: Hardfacing of continuous casting rollers and similar rollers operating at high service temperatures.	
FCO 510	EN 14700	Open-arc flux cored wire, depositing high chromium alloy designed for resisting high stress grinding abrasion with low impact. Especially used on earth moving equipments contact surfaces with soil and cement raw materials. Weld metal deposit is composed of an austenitic matrix and chromium carbides. Machinable only by grinding.	 
	TS EN 14700 DIN 8555		
	~T Fe14 ~T Fe14 MF 10-GF-60-CGRZ		
		Typical Applications: Hardfacing in wear plates, conveyors, bulldozer buckets and teeth.	
FCO 512	EN 14700	Open-arc flux cored wire, which is developed for hardfacing of parts, subjected to especially high abrasion and low degree of impact. Weld metal has high hardness due to it's high chromium carbide content and machinable only by grinding. Transverse cracks, caused by high hardness level, do not have any negative effect on the abrasion resistance. Recommend to apply as maximum 3 passes.	 
	TS EN 14700 DIN 8555		
	~T Fe14 ~T Fe14 MF 10-GF-65-GR		
		Typical Applications: Suitable for hardfacing of wear plates, bucket teeth and crusher parts of heavy construction equipments, transport augers, mixer fan blades and crushers which are made of carbon steels, low and high alloy steels or Ni-hard materials.

Hardfacing Flux Cored Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCO 514 EN 14700 TS EN 14700 DIN 8555		Open-arc flux cored wire which is developed for hardfacing of wear plates and parts, subjected to high abrasion and low impact. Weld metal has high hardness due to it's high chromium carbide content and machinable only by grinding. Transverse cracks, caused by high hardness level, do not have any negative effect on the abrasion resistance. Typical Applications: Suitable for hardfacing of wear plates, cement conveyor screws, bucket edge and teeth, crusher parts of heavy construction equipments, catalytic pipes.	
FCO 528 EN 14700 TS EN 14700 DIN 8555		Open-arc flux cored wire which is designed to give extreme resistance to high stress and gouging abrasion and medium impact even at higher temperatures, up to 450°C. Weld metal deposit is composed of an austenitic matrix and Cr and Nb complex carbides so, will readily stress relief check crack which is not detrimental to abrasion resistance, but decrease impact resistance. Hardfacing shall not exceed 8 mm in heighth. Weld metal is machinable by grinding. Typical Applications: Hardfacing of grinders and presses in cement and brick industries, concrete pump seats, bucket teeth and lips on bucket-wheel excavators in coal and phosphate mines, brick and clay mill augers, wear plates and screens in the coal industry, bulldozer blades working in sand.	
FCO 532 EN 14700 TS EN 14700 DIN 8555		Hardfacing open-arc flux cored wire which is developed for hardfacing of parts subjected to especially high gouging abrasion and low degree impact. Weld metal deposit is composed of an austenitic matrix and Cr and Nb complex carbides so, will readily stress relief check crack which is not detrimental to abrasion resistance, but decrease impact resistance. Weld metal has high hardness and excellent wear resistance even in single pass due to In order to have good results, maximum 2 passes shall be welded. Typical Applications: Suitable for hardfacing of pumps and mixer parts, conveyer screws, bulldozer blades, shovel bucket, lips and teeths, brick and clay mill augers, wear plates and screens in mineral, stone, sand and coal mines.	
FCO 540 EN 14700 TS EN 14700 DIN 8555		Open-arc flux cored wire, designed to resist high stress grinding abrasion and solid erosion at service temperatures up to 600°C. Deposits weld metal which is contains Cr, Nb, Mo alloys with addition of W and V carbides. Hardfacing shall not exceed 6 mm in heighth. Weld metal is machinable by grinding. The deposit will readily stress relief check crack which is not detrimental to abrasion resistance. Typical Applications: Hardfacing wear plates, sinter plant parts, exhaust fan blades in pellet plants, pearlite crushers, bucket teeth and lips on bucket-wheel excavators in phosphate mines, boiler fan blades in sugar cane industry, burden area in blast furnace bells, wear plates in blast furnace belless top charging systems.	
FCH 801 AWS/ASME SFA 5.21 EN 14700 TS EN 14700 DIN 8555		Gas shielded, flux cored hardfacing wire which deposits Co-Cr-W alloy weld metal. Suitable to use in hardfacing of parts subjected to either the single or combined effect of heavy metal-to-metal wear or abrasion, high temperatures (ranging from 500°C to 900°C) and corrosive environments. Due to it's very high toughness and shock resistance, also suitable to use on parts subjected to high impacts and and thermal shocks. Typical Applications: Hardfacing of plastic extrusion screws, tools to cut paper, cardboard floor coverings, roofing, wood.

FLUX CORED ARC WELDING WIRES

Hardfacing SAW Flux Cored Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCS 335			
EN 14700 TS EN 14700 DIN 8555	T Fe1 T Fe1 UP 1-GF-350-P	Flux cored wire for submerged arc hardfacing of parts subjected to metal-to-metal friction wear (adhesion) and medium degree impacts. SHF 604 flux is used together with this wire for hardfacing applications. Weld metal is easily machinable by chip forming. Interpass temperature should not exceed 250°C, during welding. Typical Applications: Suitable for hardfacing rollers, railway rails and crossings, rolling mills, caterpillar track rolls and tracks, sprockets, shafts, crane rollers and idler and mine car wheels.	 
FCS 345			
EN 14700 TS EN 14700 DIN 8555	~T Fe1 ~T Fe1 UP 1-GF-45-P	Flux cored wire for submerged arc hardfacing of parts subjected to metal-to-metal friction (adhesion) and medium degree impacts. SHF 604 flux is used together with this wire for hardfacing applications. Weld metal is easily machinable by chip forming. Interpass temperature should not exceed 250°C, during welding. Typical Applications: Suitable for hardfacing rollers, rolling mills, caterpillar track rolls and tracks, sprockets, shafts, crane rollers and idler and mine car wheels.	 
FCS 355			
EN 14700 TS EN 14700 DIN 8555	T Fe3 T Fe3 UP 6-GF-55-P	Flux cored wire for submerged arc hardfacing of parts subjected to low stress abrasion with high compression stress and high impact. SHF 604 flux is the proper flux for hardfacing applications. Due to its high hardness weld metal is only machinable by grinding or carbide tipped tools. Typical Applications: Hardfacing of steel mill rolls, crane wheels, cable sheaves.	 
FCS 356			
EN 14700 TS EN 14700 DIN 8555	T Fe3 T Fe3 UP 6-GF-55-PT	Flux cored wire for submerged arc welding, which is developed for hardfacing of parts subjected of impact high compressive stresses and metal-to-metal wear. Provides martensitic weld metal with high hardness. Weld metal can be machined by grinding or by diamond cutting bits. It is recommended to apply a buffer layer on base metals with high carbon and low weldability, before hardfacing. The deposit is heat treatable and forgeable. Typical Applications: Suitable for hardfacing of rope and cable sheaves, bed knives, steel mill rollers, crane wheels, forging dies.	 
FCS 415			
EN 14700 TS EN 14700 DIN 8555	T Fe7 T Fe7 UP 5-GF-40 (45)-C	Flux cored wire for hardfacing of parts subjected to metal-to-metal wear (adhesion), moderate impact, creep, thermal fatigue and corrosion at high temperatures. Especially designed for hardfacing and renovation of continuous casting rollers. SHF 604 is the suitable flux for these hardfacing applications. Ferritic-martensitic weld metal contains Cr, Ni, Mo, V and Nb alloys. Provides smooth and easily machinable surface on stringer weld bead or weaving technique. Typical Applications: Hardfacing of continuous casting rollers and similar rollers operating at high service temperatures.

FLUX CORED ARC WELDING WIRES

Hardfacing SAW Flux Cored Wires

Product Name and Standards		Applications and Properties	Polarity Welding Positions
FCS 417			
EN 14700 TS EN 14700 DIN 8555	~T Fe7 ~T Fe7 UP 5-GF-45-(50)-C	Flux cored wire for hardfacing of parts subjected to metal-to-metal wear (adhesion), moderate impact, creep, thermal fatigue and corrosion at high temperatures. Especially designed for hardfacing and renovation of continuous casting rollers, where high hardness is required. SHF 604 is the suitable flux for these hardfacing applications. Ferritic-martensitic weld metal has higher level of hardness with respect to FCS 415 and weld metal contains Cr, Ni, Mo, V and Nb alloys. Provides smooth and easily machinable surface on stringer weld bead or weaving technique. Typical Applications: Hardfacing of continuous casting rollers and similar rollers operating at high service temperatures.	
FCS 420			
EN 14700 TS EN 14700 DIN 8555	~T Fe7 ~T Fe7 UP 6-GF-50-C	Flux cored wire for submerged arc hardfacing of parts subjected to metal-to-metal wear (adhesion), moderate impact, thermal fatigue and corrosion at high temperatures. Especially designed for hardfacing and renovation of continuous casting rolls. SHF 604 flux is used together with this wire for hardfacing applications. Provides smooth and easily machinable surface on stringer weld bead or weaving technique. Typical Applications: Suitable for hardfacing of rolling rolls which are subjected to high operating temperatures and corrosion and rolls working on similar conditions in iron and steel works. Steel mill rollers, continuous casting rollers.	
FCS 421			
EN 14700 TS EN 14700 DIN 8555	~T Fe7 ~T Fe7 UP 6-GF-50-(55)-C	Flux cored wire for submerged arc hardfacing of parts subjected to metal-to-metal wear (adhesion), moderate impact, thermal fatigue and corrosion at high temperatures. Especially designed for hardfacing and renovation of rolling rolls. SHF 604 flux is used together with this wire for hardfacing applications. Has higher level of hardness with respect to FCS 420. Provides smooth and easily machinable surface on stringer weld bead or weaving technique. Typical Applications: Suitable for hardfacing of rolling rolls which are subjected to high operating temperatures and corrosion and rolls working on similar conditions in iron and steel works. Steel mill rollers, continuous casting rollers.	
FCS 430			
EN 14700 TS EN 14700 DIN 8555	~T Fe7 ~T Fe7 UP 5-GF-200-C	Flux cored wire for submerged arc hardfacing and buffer layer application on parts subjected to metal-to-metal wear (adhesion), moderate impact, thermal fatigue and corrosion at high temperatures. Especially designed to be used as a buffer layer in new continuous casting rollers, before hardfacing, in order to reduce dilution and crack susceptibility. SHF 604 is the suitable flux for these hardfacing applications. Provides smooth and easily machinable surface on stringer weld bead or weaving technique. Typical Applications: Suitable for buffer layer in new continuous casting rolls, before hardfacing layers.

Unalloyed and Low-Alloyed Steel SAW Fluxes

Product Name and Standards

SF 104

EN ISO 14171 S A AB 1
TS EN ISO 14171 S A AB 1

Applications and Properties

Alumina-basic type, agglomerated submerged arc welding flux, which is designed for butt and fillet welding and for the single- and multi-pass butt welding of mild, medium and high tensile steels in shipbuilding and steel constructions. Provides good penetration in one-side-welding and two-side-welding processes. Has a high current carrying capacity and good operating characteristics both on alternative and direct currents. Very easy slag removal in fillet and V-groves. Smooth and clean weld beads blending into base metal. Suitable to use in steel construction, shipbuilding, tank, pressure vessel and boiler production.

SUBMERGED ARC WELDING (SAW) WIRES AND FLUXES

Unalloyed and Low-Alloyed Steel SAW Fluxes

Product Name and Standards

SF 113

EN ISO 14174 S A MS/CS 1
TS EN ISO 14174 S A MS/CS 1

Applications and Properties

Agglomerated, manganese-silicate type flux for welding general structural steels and pipe steels. Provides sound welds in steels containing low silicon and manganese. Especially suitable for fillet and groove welds in steel constructions, LPG cylinder, pressure vessel production, spirally welding of pipes. Suitable to use at high welding speeds with single and multi-wires. Possible to use both in alternative and direct currents. Good wetting properties blending into the base metal, very easy slag removal in fillet and V-grooves. Provides flat and nice weld profile without undercut.

SUBMERGED ARC WELDING (SAW) WIRES AND FLUXES

Unalloyed and Low-Alloyed Steel SAW Fluxes

Product Name and Standards

SF 124

EN ISO 14174 S A AB 1
TS EN ISO 14174 S A AB 1

Applications and Properties

Alumina-basic type, agglomerated submerged arc welding flux, which is developed for single- and multi-wire (tandem) welding of butt and fillet joints in shipbuilding, steel constructions, storage tank and machine production. Suitable to use in single and multi pass welding in thick and thin sections. Due to it's metallurgically neutral characteristics, there is low Si and Mn pick-up from flux, it can be safely used in multi-pass applications in thick sections. Has a high current carrying capacity and possible to use both in alternative and direct currents. Provides bright and very clean weld surface appearance with easy slag removal in fillet joints and narrow V-grooves.

Unalloyed and Low-Alloyed Steel SAW Fluxes

Product Name and Standards

SF 204

EN ISO 14174 S A AB 1
TS EN ISO 14174 S A AB 1

Applications and Properties

Agglomerated semi-basic flux for welding carbon and low alloy steel in single or multipass technique and with single or multi-wire applications. Suitable for use in production of pressure vessel, pipe, boiler, tank, LPG bottles, steel construction and in shipbuilding. The weld metal, produced in combination with corresponding wire electrodes, offers good mechanical properties also at low temperatures. Good slag removal in fillet and groove welds. Possible to use both in alternative and direct currents.

SUBMERGED ARC WELDING (SAW) WIRES AND FLUXES

Unalloyed and Low-Alloyed Steel SAW Fluxes

Product Name and Standards

SF 212

EN ISO 14174 S A AR 1
TS EN ISO 14174 S A AR 1

Applications and Properties

Rutile type, agglomerated submerged arc welding flux, which is designed for welding of at high speeds with excellent bead appearance. Generally used in thin plates in shipbuilding, pressure vessels, LPG Cylinders, small tanks, boiler, beams, thin walled pipes, tubes and lamp posts. Owing to Mn and Si alloys, make it suitable for carbon steel welding with single or multi-wires, in one and multi passes. Possible to use both in direct and in alternative currents. Slag is generally self releasing and slag removal is very easy in narrow fillet and root passes.

SUBMERGED ARC WELDING (SAW) WIRES and FLUXES

Unalloyed and Low-Alloyed Steel SAW Fluxes

Product Name and Standards

SF 304

EN ISO 14174 S A AB 1
TS EN ISO 14174 S A AB 1

Applications and Properties

Alumina-basic type, agglomerated submerged arc welding flux, developed particularly for spiral and longitudinal welding of pipes. It gives the possibility of high-speed welding in the welding of thin and medium thick pipes by single or multi-wires (tandem/twin). Bead appearance is good. Especially in pipe welding, inner and outer welds are smooth and provide necessary penetration. It has high current carrying capacity and can be used in alternative and direct currents. Provides smooth weld beads, good weld bead appearance with high penetration.

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
SF 401		Fluoride-basic type, agglomerated submerged arc welding flux with high basicity, it is designed for the welding of high strength fine grained structural steels, cryogenic steels and steels, resistant to ageing. Generally used for the welding of thick sections in the offshore, wind tower, nuclear and pressure vessel industries. Provides very high toughness values at low temperatures, in combination with approved wires. Due to it's high current carrying capacity and good operating characteristics both on alternative and direct currents, possible to use in one side welding and two side welding processes by single or multi-wires (tandem/twin). Owing to it's neutral behaviour, it is advisable to use wire electrodes having higher manganese and silicon content in tandem and multi wire applications. Has high penetration, smooth weld beads with high X-ray quality.	 If required 2 Hour

SHF 325			
EN ISO 14174	S A CS 3	Alloyed and agglomerated flux, which is designed for submerged arc hardfacing of parts subjected to metal to metal friction wear, moderate impact and low stress mineral abrasion. Provides weld metal with 225-300 HB hardness, when used with SW 702 wire electrode. Possible to use in direct current. Hardness and transfer of alloying elements to the weld metal depends on welding parameters used. For instance, optimum welding parameters for 4.00 mm wire electrode are about 600 A, 32 V, 50 cm/min. welding speed. Gives very smooth and clean weld bead surfaces, slag removal is very easy and generally slag is self releasing. Typical Applications: Suitable for hardfacing of machine gear parts, rails, supports rolls of caterpillars, pulleys, locomotive wheels, table and support rolls in iron and steel industry.	   If required 2 Hour
TS EN ISO 14174	S A CS 3		
SHF 333			
EN ISO 14174	S A FB 3	Alloyed and agglomerated flux, which is designed for submerged arc hardfacing of parts subjected to metal to metal friction wear, moderate impact and low stress mineral abrasion. Provides weld metal with 300-350 HB hardness, when used with SW 702 wire electrode. Possible to use in direct current. Hardness and transfer of alloying elements to the weld metal depends on welding parameters used. Gives very smooth and clean weld bead surfaces, slag removal is very easy and generally slag is self releasing. Typical Applications: Hardfacing of track rollers, idlers, couplings, piston rod ends, earth moving equipment, rolls, mills, etc. the alloying effect to the flux depends, to a large degree, on the weld parameters chosen.	   If required 2 Hour
TS EN ISO 14174	S A FB 3		
SHF 335			
EN ISO 14174	S A CS 3	Alloyed and agglomerated flux, which is designed for submerged arc hardfacing of parts subjected to metal to metal friction wear, moderate impact and low stress mineral abrasion. Provides weld metal with 325-400 HB hardness, when used with SW 702 wire electrode. Possible to use in direct current. Hardness and transfer of alloying elements to the weld metal depends on welding parameters used. Gives very smooth and clean weld bead surfaces, slag removal is very easy and generally slag is self releasing. For example; optimum welding parameters for wire with a diameter of 4mm 600A, 32 V and welding speed 50 cm/min. Typical Applications: Hardfacing of pinch rollers, table rolls, idlers, couplings, piston rod ends.	   If required 2 Hour
TS EN ISO 14174	S A CS 3		
SHF 345			
EN ISO 14174	S A CS 3	Alloyed and agglomerated flux, which is designed for submerged arc hardfacing of parts subjected to metal to metal friction wear, moderate impact and low stress mineral abrasion. Provides weld metal with 400-475 HB hardness, when used with SW 702 wire electrode. Possible to use in direct current. Hardness and transfer of alloying elements to the weld metal depends on welding parameters used. Gives very smooth and clean weld bead surfaces, slag removal is very easy and generally slag is self releasing. For example; optimum welding parameters for wire with a diameter of 4mm 600A, 32 V and welding speed 50 cm/min. Typical Applications: Hardfacing of pinchrolls, sinter crushers etc.	   If required 2 Hour
TS EN ISO 14174	S A CS 3

SUBMERGED ARC WELDING (SAW) WIRES AND FLUXES

Hardfacing SAW Fluxes

Product Name and Standards		Applications and Properties	Polarity Welding Positions Re-drying Information
SHF 604		Agglomerated and unalloyed (neutral) submerged arc welding flux used for hardfacing purposes. Suitable for hardfacing of continuous casting rolls, table rolls, pinch rolls, drums, wheels and rails in combination with specially designed hardfacing flux cored wires. Possible to use both in alternative and direct currents in stringer bead and oscillation technique. Provides smooth weld bead without porosity and has a very easy slag removal. Typical Applications: Hardfacing of continuous casting and pinch rollers, table rolls, idlers, crane and train wheels, rails and drums.	 If required 2 Hour

PRE-HEATING, INTERPASS TEMPERATURE AND COOLING RATE

The preheating temperature and interpass temperatures are important to prevent underbead cracking, hydrogen cracking, porosity, distortion, high hardness in HAZ, weld metal cracking, spalling, or stress failure of the part. Preheating temperature can be calculated by the carbon equivalent, C_{eq} , of the base metal.

C_{eq} for low alloy steels with alloy content :

$$C \leq \%0.5; Mn \leq \%1.0; Cr \leq \%1.0; Ni \leq \%3.5; Mo \leq \%0.6; Cu \leq \%1.0$$

$$C_{eq} = \%C + \%Mn/6 + (\%Cr + \%Mo + \%V)/5 + (\%Ni + \%Cu)/15$$

$$\text{Minimum Preheating Temperature (}^{\circ}\text{C)} = C_{eq} \times 200 + 20$$

Preheating temperature can also be calculated by using below equation, which also take into account the thickness of the base metal :

$$\text{Preheating Temperature (}^{\circ}\text{C)} = \sqrt{350 \times C_{eq} \times (1 + 0.005 \times d)} - 0.25$$

Carbon Equivalent (C_{eq})	Preheating Temperature Range ($^{\circ}\text{C}$)
$C_{eq} \leq 0.45$	No need under normal conditions
$0.46 \leq C_{eq} \leq 0.60$	100 - 200
$C_{eq} \geq 0.60$	200 - 350

It is essential that this temperature is obtained and maintained during the welding operation.

Manganese steels, on the other hand, becomes brittle if overheated above 260°C. Interpass temperatures shall be kept below 260°C during welding. As the temperature of the workpiece increase, it has to be let cool down before applying further hardfacing passes. On small parts, high localized heating shall be avoided by using a skip welding technique. Cast irons are extremely crack sensitive. The heat affected zone may be full of cracks even with high preheat temperatures.

Interpass Temperature is the temperature of the surface when welding all layers except first layer. It is just as important and should usually be as the preheat temperature.

Cooling Rate after welding affects wear resistance of some deposits, it is much more important for the control of spalling, cracking and distortion. Therefore a slow cooling rate may be required even if it reduces wear resistance.

Methods of controlling cooling rate include the following:

1. Preheating is the most effective way of slowing the cooling rate.
2. Heat input from welding slows cooling by the raising the temperature of the part.
3. Insulating the hot part immediately after welding with dry sand, lime, glass fibre blanket, etc. slows cooling. This method helps minimize residual cooling stresses, weld cracking and distortion but does not affect wear resistance of most deposits. Large parts pull heat away from the weld more quickly than small parts and they naturally cool the weld faster.

PRE-HEATING, INTERPASS TEMPERATURE AND COOLING RATE

* Preheating is not necessary.

** Necessary preheating temperatures for practical applications is too high.

Preheating Temperature (°C): Carbon Equivalent (Ceq), depends on material thickness and electrode diameter.

Formulation to calculate the preheating temperature are generally applied to steel which are not post weld heat treated. Those formulation are taking in consideration, the chemical analysis (C, Mn, Cr, Ni, . . .), the thickness of the plate, the heat input, the type of coating, the type of the weldment.

The target is to remain with a ferritic structure, to avoid cold crack, due to a martensitic structure saturated of hydrogen generally located in in the heat affected zone. Hardness is generally limited at ~220HB.

For some steel, like ASTM A387 or similar, which require a PWHT at ~680°C preheating temperature, maximum interpass temperature, as well as heating and cooling conditions are generally specified in the engineering specifications. The aim is to have temper martensite after the PWHT. A too high interpass temperature will promote ferrite instead of martensite, and after the final PWHT the weldment will not reach the requested mechanical properties.

PRE-HEATING, INTERPASS TEMPERATURE AND COOLING RATE

In hardfacing, martensitic steel are used when deposit requirement is requested hardness, this requirement is mainly controlled by C and Cr content to reach the level is requested. Because of the quantities of carbide formers is present in the overlay, the majority of C is kept by carbide formation, and the usual formulation to calculate the preheat temperature is no more appropriated.

Fig. 1 / Practical Preheating Temperature °C

Practical preheating temperature are giving by table 1. After welding, the deposit will be followed directly by a post heating at least 300°C during 2-3 H to reduce the hydrogen content. Cooling will be very slow from post heating temperature up to 150°C. The purpose of the slow cooling is to favorize the diffusion of hydrogen, uniformization of the temperature before starting the martensite formation when crossing the Ms point. Soaking time at preheating temperature need to be high enough to have a uniform temperature through the full toughness of the piece.

The best is using the dilatometric curve of the deposit. When overlay is deposited below Ms temp, differential tempering are created in the area of the fusion line of subsequent bead, creating an uneven surface characteristic, thus corrugated surface can appear during machining or during service because of hardness and difference wear resistance

Fig. 2 / Dilatometric Curve

CARBON EQUIVALENT (CE) AND PRE-HEATING TEMPERATURE

The table shows the recommended preheating temperatures for a number of different metals which will be hardfaced with given filler metals.

[illegible]

This image shows a full page of blank, lined paper. It features approximately 30 evenly spaced horizontal grey lines across its entire surface, typical of notebook or legal stationery. The paper is otherwise completely empty, with no margins, text, or other markings.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Non-Stop Welding Since 1957

Magmaweld is a developer & manufacturer of Stick Electrodes, MIG/MAG & TIG Wires, Flux Cored Wires, Submerged-Arc Wires and Fluxes, Welding Machines, Fume Extractors, Welding Ancillary Products and Robotic Automation Systems since 1957 in Turkey. 95% of its sales program is manufactured by the two factories in Manisa/Turkey.
