

## MAGMA MEKATRONIK QUALITY POLICY

---

Our strategic objective is to standardize all processes and ensure continuous improvement as we develop, manufacture, sell, and provide after-sales services for welding and cutting machines as well as fume extraction and filtration systems. While pursuing these objectives, we commit to acting in line with human values, environmental considerations, and legal requirements.

We further commit to introducing new standards into our processes, monitoring their implementation, making corrections when necessary, and ensuring continuity—based on analyses carried out with the participation of all relevant parties whenever there are changes in Method, Material, Machine, or Human factors.

As drivers of improvement, we pledge to systematically evaluate internal and external issues, internalize risk-based thinking, and ensure timely action is taken when needed.
